Aryadeep Roychoudhury,2023-07-21 Abiotic stresses such as drought high salt cold heat UV radiation heavy metal pollution etc are increasingly responsible for restricting plant growth and agricultural production and are becoming more alarming due to threats from global climate change To combat these threats this new 3 volume set provides a comprehensive understanding of the mechanisms that mediate biosynthesis accumulation and degradation of plant metabolites to improve crop production and enhance abiotic stress tolerance in plants Volume 1 Secondary Metabolites in Environmental Stress Tolerance focuses exclusively on the diverse secondary metabolites that play a major role in the adaptation of plants to the environment and in overcoming stress conditions as well as their implications for enhancing tolerance mechanisms The book

presents information on the protective role rendered by a wide array of antioxidative secondary metabolites and their regulation during diverse environmental stress

Volume 2 Trace Elements in Environmental Stress Tolerance throws light on the different inorganic trace elements including metal nanoparticles that help to deal with environmental stresses While these elements at high level create considerable phytotoxicity and halt metabolic and enzymatic activity they also promote growth and development in limited quantity so that they have significant potential in revamping plant morphology and physiology under stressed conditions Hence optimum concentration management of these elements can help to mitigate world hunger and contribute toward sustainable agriculture and food security under challenging environments

Volume 3 Sustainable Approaches for Enhancing Environmental Stress Tolerance focuses on the agronomic and biochemical approaches as well as biotechnological and high throughput technologies including the prospects of genetic engineering epigenetics and the latest CRISPR Cas technology in generating stress tolerant plants The volume provides a clear roadmap for the implementation of techniques for improving abiotic stress tolerance in plants for better sustenance
