Schotte,2019-07-30 Hands on science in the Age of Exploration Winner of the John Lyman Book Award in Naval and Maritime Science and Technology by the North American Society for Oceanic History and the Leo Gershoy Prize by the American Historical Association Throughout the Age of Exploration European maritime communities bent on colonial and commercial expansion embraced the complex mechanics of celestial navigation They developed schools textbooks and instruments to teach the new mathematical techniques to sailors As these experts debated the value of theory and practice memory and mathematics they created hybrid models that would have a lasting impact on applied science In Sailing School a richly illustrated comparative study of this transformative period Margaret E Schotte charts more than two hundred years of navigational history as she investigates how mariners solved the challenges of navigating beyond sight of land She begins by outlining the influential sixteenth century Iberian model for training and certifying nautical practitioners She takes us into a Dutch bookshop stocked with maritime manuals and a French trigonometry lesson devoted to the idea that navigation is nothing more than a right triangle The story culminates at the close of the eighteenth century with a young British naval officer who managed to keep his damaged vessel afloat for two long months thanks largely to lessons he learned as a keen student This is the first study to trace the importance for the navigator s art of the world of print Schotte interrogates a wide variety of archival records from six countries including hundreds of published textbooks and never before studied manuscripts crafted by practitioners themselves Ultimately Sailing School helps us to rethink the relationship among maritime history the Scientific Revolution and the rise of print culture during a period of unparalleled innovation and global expansion **The Elements of Relativity** David M. Wittman,2018-05-10 Relativity has much to offer for a well rounded education Yet books on relativity either assume

a strong background in physics and math aimed at advanced physics students or alternatively offer a broad description with little intellectual challenge This book bridges the gap It aims at readers with essentially no physics or math background who still find it rewarding to think rigorously The book takes a thinking tools approach by first making readers comfortable with a new thinking tool and then applying it to learn more about how nature works By the end of the book readers will have collected a versatile toolbox and will be comfortable using the tools to think about and really understand the intriguing phenomena they may have only heard about including the twin paradox black holes and time travel End of chapter exercises span a range of difficulty allowing adventurous readers to stretch their understanding further as desired Students who have studied or are studying relativity at a more mathematical level will also find the book useful for a more conceptual understanding
