

Test tube holder is an easy way to organize test tubes and prevent the test tubes from falling and breaking. It provides a safe way for you to store test tubes, especially when they are being used for ongoing experiments. It is used to hold test tubes. It is used for holding a test tube in place when the tube is hot or should not be touch.

A test tube brush or spout brush is a brush used for cleaning test tubes and narrow mouth laboratory glassware, such as graduated cylinders, burettes, and Erlenmeyer flasks.

Test tubes are widely used by chemists to handle chemicals, especially for qualitative experiments and assays.

Spatulas are used to transport and distribute dry chemical compounds. Spatulas are used most often when weighing out chemicals on a balance because they allow you to collect very small quantities of the chemical at a time.

Test tube racks used to hold upright multiple test tubes at the same time. They are most commonly used when various different solutions are needed to work with simultaneously, for reasons, for safe storage of test tubes, and to ease the transport of multiple tubes.

A **water bath** is a laboratory equipment that is used to incubate samples at a constant temperature over a long period of time. Water bath is a preferred heat source for sensitive chemicals, instead of to avoid being in direct contact.

Evaporating Dishes are glassware containers used for laboratory testing. They are used for the evaporation of liquids and solutions to produce a solid substance or concentrated solutions. Dishes have a shallow flat round surface to promote evaporation.

Distilling flasks, also known as distillation flasks, are types of laboratory flask forming part of larger distillation assemblies used for the separation and/or purification of liquids or liquid mixtures where the components have different boiling points.
