BioHydrogen Oskar R. Zaborsky, 2007-08-30 The world needs clean and renewable energy and hydrogen represents an almost ideal resource Hydrogen is the simplest and most abundant molecule in the universe yet one that is a challenge to produce from renewable resources Biohydrogen or hydrogen produced from renewable resources such as water or organic wastes by biological means is a goal worthy of increased global attention and resources The purpose of BioHydrogen 97 was to bring together leaders in the biological production of hydrogen from the United States Japan Europe and elsewhere to exchange scientific and technical information and catalyze further cooperative programs Participants came from at least different countries representing academia industry and government Especially important participants were young research scientists and engineers the next generation of contributors The conference consisted of plenary presentations topical sessions posters and mini workshop discussions on key areas of biohydrogen It was designed to maximize information exchange personal interaction among participants and formulate new international initiatives BioHydrogen 97 was an outgrowth of an international workshop convened by the Research Institute of Innovative Technology for the Earth RITE and was held in Tokyo Japan November 24-25 1994 The RITE workshop was highly successful but largely limited to traditional biochemical and biological studies and not engineering research topics Neurotrophin Protocols Robert A. Rush, 2008-02-03 The past decade has seen an extraordinary growth in research interest in neurotrophic factors and the study of the neurotrophin family has led this activity Nevertheless this area of research has often struggled as a result of

techniques that were either inadequate or just emerging from other research fields and disciplines Neurotrophin Protocols has brought together many leaders in the neurotrophin field who detail their special expertise in a wide variety of techniques Though most procedures are valid across many different fields of research some of those described here have been developed to address particular issues within the neurotrophic factor field The protocols cover a broad range of biochemical histological and biological techniques that are often required by the modern laboratory However all have been written with sufficient detail to allow any laboratory to achieve proficiency without need of reference to other texts Neurotrophin Protocols is divided into four sections dealing with protein RNA recombinant and in vivo techniques Protein techniques have in general been less successfully employed than those dealing with RNA or DNA However procedures that achieve localization and quantification of the neurotrophins are now being used more extensively Their inclusion here should assist further studies at the protein level Transgenic cell lines and animals are commonplace in the scientific research literature but their inclusion in several chapters in this book provide some novel uses that are not readily available elsewhere The Prokaryotes Stanley Falkow,Eugene Rosenberg,Karl-Heinz Schleifer,Erko Stackebrandt,2006-10-10 The revised Third Edition of The Prokaryotes acclaimed as a classic reference in the field offers new and updated articles by experts from around the world on taxa of relevance to medicine ecology and industry Entries combine phylogenetic and systematic data with insights into genetics physiology and application Existing entries have been revised to incorporate rapid progress and technological innovation The new edition improves on the lucid presentation logical layout and abundance of illustrations that readers rely on adding color illustration throughout Expanded to seven volumes in its print form the new edition adds a new searchable online version
