Describe how the embryos changed for each of these organisms from their earliest to latest stages.

Describe how the embryos changed for each of these organisms from their earliest to latest stages.

Species	Anatomical Changes From Early to Late Stages
Human	Developed limbs, defined features in face, neck, ears, loss of tail, tiny fingers present
Chicken	Developed beak, tail shorter, wings and legs developed, head quite large
Rabbit	Tail gone, developed limbs, detailed features in ears and mouth
Tortoise	Shell developed, limbs have developed, tail is thinner, large belly, long tail, beak
Salamander	Has gills, tail and large underbelly
Fish	fins developed, gills, tail and scales

1. Look again at the six embryos in their earliest stages. Describe the patterns you see. What physical similarities exist between each of the embryos?

Same basic shape, circular spots (eyes) and underbelly, all have tails, tiny bumps on underside, hole for ear

2. Does this suggest an evolutionary relationship? Explain how these embryos can be used as evidence of a common ancestor between each of these six organisms.

Examination of vertebrate embryos reveals that during corresponding stages of early development, the embryos appear to be very similar. For example, all vertebrate embryos pass through stages in which they have gill pouches. The pouches eventually develop into the gill apparatus in fish; in later-evolving vertebrates that do not have gills, the gill pouches undergo further refinement and develop into structures associated with the head and neck. Similarly, all early vertebrate embryos have tails, which persist in some animals but regress during the later stages of development of humans. Thus, the individual development of an animal occurs through a series of stages that paint a broad picture of the evolutionary stages (phylogeny) of the species to which it belongs. "Ontogeny recapitulates Phylogeny", Haeckel

Rogers, 2024-05-31 According to polling data most Americans doubt that evolution is a real phenomenon And it s no wonder that so many are skeptical many of today s biology courses and textbooks dwell on the mechanisms of evolution natural selection genetic drift and gene flow but say little about the evidence that evolution happens at all How do we know that species change Has there really been enough time for evolution to operate With *The Evidence for Evolution* Alan R Rogers provides an elegant straightforward text that details the evidence for evolution Rogers covers different levels of evolution from within species changes which are much less challenging to see and believe to much larger ones say from fish to amphibian or from land mammal to whale For each case he supplies numerous lines of evidence to illustrate the changes including fossils DNA and radioactive isotopes His comprehensive treatment stresses recent advances in knowledge but also recounts the give and take between skeptical scientists who first asked how can we be sure and then marshaled scientific evidence to attain certainty *The Evidence for Evolution* is a valuable addition to the literature on evolution and will be essential to introductory courses in the life sciences

**The evidence of evolution. Smithsonian Library Series** Nicholas Hotton, Evolution: the Grand Experiment Dr. Carl Werner, Carl Werner, 2007 Darwin's book on evolution admitted that intermediate links were perhaps the most obvious and serious objection to the theory of evolution Darwin recognized that the fossils collected by scientists prior to 1859 did not correspond with his theory of evolution but he predicted that his theory would be confirmed as more and more fossils were found One hundred and fifty years later Evolution The Grand Experiment critically examines the viability of Darwin's theory
