NASA Technical Paper ,1979 *Encyclopedia of Quantitative Risk Analysis and Assessment* ,2008-09-02 Leading the way in this field the Encyclopedia of Quantitative Risk Analysis and Assessment is the first publication to offer a modern comprehensive and in depth resource to the huge variety of disciplines involved A truly international work its coverage ranges across risk issues pertinent to life scientists engineers policy makers healthcare professionals the finance industry the military and practising statisticians Drawing on the expertise of world renowned authors and editors in this field this title provides up to date material on drug safety investment theory public policy applications transportation safety public perception of risk epidemiological risk national defence and security critical infrastructure and program management This major publication is easily accessible for all those involved in the field of risk assessment and analysis For ease of use it is available in print and online , **Communications, Signal Processing, and Systems** Qilian Liang,Wei Wang,Xin Liu,Zhenyu Na,Baoju Zhang,2023-05-11 This book brings together papers presented at the 2022 International Conference on Communications Signal Processing and Systems online July 23 24 2022 which provides a venue to disseminate the latest developments and to discuss the interactions and links between these multidisciplinary fields Spanning topics ranging from communications signal processing and systems this book is aimed at undergraduate and graduate students in Electrical Engineering Computer Science and Mathematics researchers and engineers from academia and industry as well as government employees such as NSF DOD and DOE *Immune regulation at the fetal?maternal interface with focus on decidual macrophages* Judit Svensson?Arvelund,2015-04-21 A successful pregnancy requires that the maternal immune system adapts to tolerate the semi allogeneic fetal placental unit This adaptation mainly occurs locally i e at the fetal maternal interface where fetal derived tissues come into close contact with maternal cells in the uterine endometrium called decidua during pregnancy Macrophages and regulatory T Treg cells are maternal immune cells that are enriched in the decidua and they likely play a central role in promoting fetal tolerance However the precise function of decidual macrophages and the factors regulating both macrophages and Treg cells in humans are unknown The aim of this thesis was to characterize the phenotype and function of decidual macrophages from first trimester human pregnancy and to identify factors responsible for inducing tolerogenic properties in both decidual macrophages and Treg cells CD14 decidual macrophages showed characteristics of immune suppressive or homeostatic macrophages expression of CD163 CD206 and CD209 mainly produced immunosuppressive cytokines like IL 10 and IL 35 while levels of inflammatory cytokines for instance IL 12 and IL 23 were low Decidual macrophages also induced the expansion of CD25^{high}Foxp3 Treg cells but not of Th1 Th2 and Th17 cells in vitro In addition decidual macrophages preferentially secreted the monocyte and Treg cell associated chemokines CCL2 and CCL18 while Th1 Th2 and Th17 related chemokines were produced at low levels These results suggest that decidual macrophages contribute to create the unique decidual cell composition and a tolerogenic immune environment that is compatible with fetal development Further by comparing decidual macrophages with different in

vitro macrophage subsets we showed that M-CSF and IL-10 but not GM-CSF Th1 or Th2 stimuli induced macrophages that resemble decidual macrophages in terms of cell surface marker expression cytokine and chemokine production and gene expression profile First trimester placental tissue in particular placental trophoblast cells was identified as an important source of M-CSF and IL-10 We also demonstrated that human fetal derived placental tissue can induce the characteristics of decidual macrophages CD163 CD206 CD209 IL-10 CCL18 and the selective expansion of functionally suppressive CD25^{high}Foxp3⁺ Treg cells the latter partly mediated through IL-10 TGF and TRAIL The placenta also limited activation of Th cells for instance by generally reduced cytokine production Our data show that the placenta has a unique ability to induce tolerogenic immune cells with a reduced inflammatory potential which is essential for maintaining tissue integrity and preventing inflammation induced fetal loss
