

# Formal Lab Report Format

**Title of Lab:**

**Purpose(s) of Lab:** Include hypothesis if appropriate.

**Materials Used:** List these. If this is a virtual lab, do not list your computer as a material. Instead, list the simulated equipment used in the virtual lab.

**Procedure:** Be specific here, in step-wise form. Lab reports should always be written in 3<sup>rd</sup> person past tense. So, instead of saying, "I poured 20.0 mL of the solution into the beaker", say "20.0 mL of the solution was poured into the beaker". Don't write this from a virtual perspective, even if you do the entire lab on the computer! Write as though you actually poured the chemicals or heated the beaker, etc.

**Data:** Make a chart here; put the independent variable in the left column and the dependent variable in the right column.

**Calculations:** Did anything need to be calculated for this lab? If you used the calculator at all, put your calculations in this section – be sure to include units in all answers. It will be necessary to only show one example of each type of calculations, but answers for all calculations. A table format would be good for all the answers. Not all labs will require calculations. If no calculations were done, do not include this section.

**Graph(s):** There may or may not be graphs; if you can graph the data, you should. Use Graphical Analysis, if possible. Refer to the Graphical Analysis tutorial from the Course Introduction. You can paste the graph in the document or upload the graph(s) separately. Not all labs require graphs. Only include them where appropriate.

**Results:** Here you will trace the source on any large disparity between estimated and calculated answers to problems consider possible effects of measurement errors on calculations, recognize the relationship between accuracy and precision. Scientific researchers are expected to critically assess the quality of data including possible sources of bias in their investigations' hypotheses, observations, data analyses, and interpretations.

**Data, Calculations, Graphs, and Results may be combined into one section as needed.**

**Conclusion:** Answer the purpose of the lab here. DO NOT SAY that the purpose was achieved.....DO SAY, for example, the relationship between distance and time was found to be direct as evidenced in the graph. The reader should be able to tell that you actually learned something from the lab!

**Questions:** If there are questions from the lab, answer them here.
