[Provide requirements of the system, user or business, to classes/categories of users. Provide the type of user characteristics of each set of users. List the functional req user requirement. As the functional requirements are de functional requirements are traced to the user requirement functional requirements is not mandatory in the traceability parent requirements are already traced to them.

User requirement information can be in text or process flow class that shows what inputs will initiate the system functionality.

what outputs are expected to be generated by the system. The scenarios should be comprehensive, to the extent that all user types and all major functions are covered. Give each user requirement a unique number. Typically, user requirements have a numbering system that is separate from the functional requirements. Requirements may be labeled with a leading "U" or other label indicating user requirements.]

4.3 Data Flow Diagram

[Decompose the context level diagrams to determine the functional requirements. Data flow diagrams should be decomposed down to the functional primitive level. These diagrams are further decomposed during design.]

4.4 Logical Data Model/Data Dictionary

[Create the initial Logical Data Model. Describe data requirements by providing data entities, decomposition, and definitions in a data dictionary. The data requirements describe the business data needed by the application system. Data requirements do not describe the physical database and are not at the level of identifying field names.]

Design Guidelines and Functional Specifications for Simulation of the Battlefield Management System's (BMS) User Interface Carl W. Lickteig, 1989 **Agent Supported Cooperative Work** Yiming Ye, E. Churchill, 2012-12-06 Improvements in computer networking have heralded great expectations for computer mediated distributed work However experience has revealed that as information flow improves a central problem for distributed workers is the administration management and control of that information Research into Computer Supported Cooperative Work CSCW investigates design methods and technologies for the support of collaboration communication and coordination of distributed group work both within and among organizations In tandem with this focus on the support of distributed communication and collaboration there have been exciting developments in the fields of Intelligent Agents and Distributed Artificial Intelligence DAI notably in the concepts theories and deployment of intelligent agents as a means of distributing computer based problem solving expertise The paradigm of multi agent systems forms a proposed basis for the design of CSCW architectures the support of CSCW operations and for addressing some of the problems of cooperative working The application of a multi agent approach to CSCW makes information exchange among the participants easier by delivering support to the participants assisting workflows and procedures and providing convenient user interfaces to CSCW systems Furthermore the ideas inherent in such an approach are also applicable to other domains such as support for interactive learning Organizations that seek to exploit the advantages offered through CSCW will benefit from the integration of agents

in the management and use of their corporate knowledge especially with the advancement of wired or wireless networking pervasive computing and other information technologies Agent Supported Cooperative Work describes the state of the art in this exciting new area covering both theoretical foundations and practical applications of ASCW It is the first book explicitly dedicated to ASCW bringing together contributions from international experts in the field

Safety of Computer Architectures Jean-Louis Boulanger, 2013-01-09 It is currently quite easy for students or designers engineers to find very general books on the various aspects of safety reliability and dependability of computer system architectures and partial treatments of the elements that comprise an effective system architecture It is not so easy to find a single source reference for all these aspects of system design However the purpose of this book is to present in a single volume a full description of all the constraints including legal contexts around performance reliability norms etc and examples of architectures from various fields of application including railways aeronautics space automobile and industrial automation The content of the book is drawn from the experience of numerous people who are deeply immersed in the design and delivery from conception to test and validation safety analysis of safety FMEA HA etc and evaluation of critical systems The involvement of real world industrial applications is handled in such a way as to avoid problems of confidentiality and thus allows for the inclusion of new useful information photos architecture plans schematics real examples

Knowledge Acquisition for Expert Systems A. Kidd, 2012-12-06 Building an expert system involves eliciting analyzing and interpreting the knowledge that a human expert uses when solving problems Experience has shown that this process of knowledge acquisition is both difficult and time consuming and is often a major bottleneck in the production of expert systems Unfortunately an adequate theoretical basis for knowledge acquisition has not yet been established This requires a classification of knowledge domains and problem solving tasks and an improved understanding of the relationship between knowledge structures in human and machine In the meantime expert system builders need access to information about the techniques currently being employed and their effectiveness in different applications The aim of this book therefore is to draw on the experience of AI scientists cognitive psychologists and knowledge engineers in discussing particular acquisition techniques and providing practical advice on their application Each chapter provides a detailed description of a particular technique or methodology applied within a selected task domain The relative strengths and weaknesses of the technique are summarized at the end of each chapter with some suggested guidelines for its use We hope that this book will not only serve as a practical handbook for expert system builders but also be of interest to AI and cognitive scientists who are seeking to develop a theory of knowledge acquisition for expert systems
