The four major methodological approaches to concept analysis (Wilson-derived methods, qualitative methods, critical analysis of the literature, and quantitative methods) are compared. The authors suggest that qualitative methods and methods that critically analyze the literature may be selected according to the level of the maturity of the concept and the purpose of the analysis. These methods have the ability to facilitate inquiry for concept development, delineation, comparison, clarification, correction, and identification. Quantitative methods may be used for exploring concepts (e.g., delineating conceptual boundaries), and quantitative instrumentation may be used for concept validation, operationalization, and measurement, thus complementing concept analysis methods by moving inquiry into another level of investigation. The authors conclude by presenting criteria for the selection of an appropriate research approach for concept analysis and criteria for evaluating concept analysis research.

The abstract meanings of some of the psychosocial and behavioral concepts used in nursing research make concept analysis an important and difficult task. Psychosocial and behavioral concepts are not always about concrete, observable, and directly measurable things or phenomena and may often only be indirectly inferred. Because of the abstract nature of these concepts, their definitions are subject to considerable debate. As one comprehensive analysis of the conceptual foundations of science has argued,

Theoretical Nursing Afaf Ibrahim Meleis,2007 This text guides you through the evolution of nursing s theoretical foundations and examines the ways in which these principles influence the practice of the discipline Jacket Theoretical Nursing Afaf Ibrahim Meleis,2011 An additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines This assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice Because of these assumptions most of the early writing about theory development was about outlining strategies that should be used rather than strategies that have already been used in the discipline to develop theories Theorists themselves did not uncover or adequately discuss ways by which they developed their theories therefore the tendency was to describe processes that were based on theories developed in other disciplines mainly the physical and social sciences And an implicit assumption was made that there should be a single strategy for theory development some claiming to begin the process from practice and others believing it should be driven by research Provided by publisher
