Sibley, 2015-08-14 Thinking Geometrically A Survey of Geometries is a well written and comprehensive survey of college geometry that would serve a wide variety of courses for both mathematics majors and mathematics education majors Great care and attention is spent on developing visual insights and geometric intuition while stressing the logical structure historical development and deep interconnectedness of the ideas Students with less mathematical preparation than upper division mathematics majors can successfully study the topics needed for the preparation of high school teachers There is a multitude of exercises and projects in those chapters developing all aspects of geometric thinking for these students as well as for more advanced students These chapters include Euclidean Geometry Axiomatic Systems and Models Analytic Geometry Transformational Geometry and Symmetry Topics in the other chapters including Non Euclidean Geometry Projective Geometry Finite Geometry Differential Geometry and Discrete Geometry provide a broader view of geometry The different chapters are as independent as possible while the text still manages to highlight the many connections between topics The text is self contained including appendices with the material in Euclid's first book and a high school axiomatic system as well as Hilbert's axioms Appendices give brief summaries of the parts of

linear algebra and multivariable calculus needed for certain chapters While some chapters use the language of groups no prior experience with abstract algebra is presumed The text will support an approach emphasizing dynamical geometry software without being tied to any particular software

3.1416 And All That DAVIS, CHINN, 2012-12-06 LYTTON STRACHEY tells the following story In intervals of relaxation from his art the painter Degas used to try his hand at writing sonnets One day while so engaged he found that his inspiration had run dry In desperation he ran to his friend Mallarmé who was a poet My poem won't come out he said and yet I'm full of excellent ideas My dear Degas Mallarmé retorted poetry is not written with ideas it is written with words If we seek an application of Mallarmé's words to mathematics we find that we shall want to turn his paradox around We are led to say that mathematics does not consist of

formulas it consists of ideas What is platitudinous about this statement is that mathematics of course consists of ideas Who but the most unregenerate formalist asserting that mathematics is a meaningless game played with symbols would deny it What is paradoxical about the statement is that symbols and formulas dominate the mathematical page and so one is naturally led to equate mathematics with its formulas
