

1.2 EXISTING SYSTEM

There are many existing systems will be there in hybrid application development. But most applications will be developed by native applications, so it is one of the biggest problems in existing systems.

Many other contents will be used in one website like an Java, PHP, Python, C# and web technologies. All other languages used in one website so visitors are don't focus on one language. He is very hesitate and going for another website, its also same then he pay some amount and learn for centers and have education websites. It's also one of the disadvantage on existing systems.

Like W3schools website are ok for beginners. But we are best the w3schools project. There is no video tutorial for w3school website but we are specially add the video to learn the theory level complicated students.

Good education oriented content also will be there in internet, and it's made available on single window option like tutorialspoint. But in this type of website visible on advertisement. It's also divert the visitors mind.

1.3 PROPOSED SYSTEM

We are develop the only web technologies languages there is no other content so web technology interested students are willing to commit our website. Most of website add many other contents and visible the advertisement but we are never apply the ads, so students are concentrate on only learn the languages.

Hybrid mobile application are cross-platform apps which can be used between different app stores without developing the app in two different versions for iOS and Android. The hybrid application development used in compatible technologies are HTML5, CSS, JavaScript, etc.

The hybrid app has much less requirements in comparison with the native app because only one app is developed for all platforms. The hybrid apps are developed in a single language and have a single code base thus that makes updating more feasible and faster in comparison to a native app.
