The Biology of Death André Klarsfeld,Frédéric Revah,2004 Why do we die Do all living creatures share this fate Is the body s slow degradation with the passage of time unavoidable or can the secrets of longevity be unlocked Over the past two decades scientists studying the workings of genes and cells have uncovered some of the clues necessary to solve these mysteries In this fascinating and accessible book two neurobiologists share the often surprising findings from that research including the possibility that aging and natural death may not be forever a certainty for most living beings Andr Klarsfeld and Fr d ric Revah discuss in detail the latest scientific findings and views on death and longevity They challenge many popular assumptions such as the idea that the death of individual organisms serves to rejuvenate species or that death and sexual reproduction are necessarily linked Finally they describe current experimental approaches to postpone natural death in lower organisms as well as in mammals Are all organisms that survive until late in life condemned to a natural death as a consequence of aging even if they live in a well protected supportive environment The variability of the adult life span from a few hours for some insects to more than a millennium for the sequoia and thirteen times that for certain wild berry bushes challenges the notion that death is unavoidable Evolutionary theory helps explain why and how some species have achieved biological mechanisms that seemingly allow them to resist time Death cannot be understood without looking into cells the essential building blocks of life Intriguingly at the level of cells death is not always an accident it is often programmed as an indispensable aspect of life which benefits the organism as a whole

Molecular Tinkering Ben Martynoga,2018-09-11 Reveals some of the thrilling developments that have transformed biology since the 1960s Highlights the challenges ahead for biologists but suggests what they can learn from the past Energetic jargon free writing that will appeal to a broad audience During the 1960s Edinburgh became a hotbed for a forward thinking group of biologists This is the story of these innovators who saw that life s big mysteries were best tackled by studying its molecular foundations It introduces the eccentric thinkers ingenious tinkerers and tenacious experimenters who broke down the cultural barriers between traditional scientific disciplines They produced a series of transformative ideas and tools that
