Sustainable and Traditional Environmental Conservation in Asia Dipayan Dey,Ayyanadar Arunachalam,2024-10-23 This book articulates the traditional Japanese concept of conservation called Satoyama for effective management of nature s goods and services at a community ecosystem interface in the climate milieu The term Satoyama

refers to socio ecological production landscapes and seascapes which are mosaics of diverse land uses and ecosystems that have long been shaped through sustainable human interactions with nature This multilevel study of conservation science therefore serves an interdisciplinary academia consistent with conventions on climate change biodiversity and sustainable development to establish links between conservation priorities and development objectives In this book the Satoyama is introduced as a rights based neo economic conservation paradigm for production linked sustainable development supplemented with case studies from Asia The International Partnership for the Satoyama Initiative was established at the 10th Conference of the Parties to the Convention on Biological Diversity in 2010 to protect and revitalise Satoyama However even after a decade this panacea for sustainability remains unfulfilled for practitioners and policy planners in the global south Satoyama have been disappearing as a result of irresponsible consumption of natural resources and drastically changing agro farming practices threatening wildlife inhabiting those areas as well as the life and livelihood of marginal communities in the vicinity In consideration of the global pandemic crisis the present monograph aims for introspection within a traditional sustainable practice of Asia to augment community resilience and preparedness *Nature-Based Solutions to 21st Century Challenges* Robert C. Brears, 2020-03-24 This book provides a systematic review of nature based solutions and their potential to address current environmental challenges In the 21st century society is faced by rapid urbanisation and population growth degradation and loss of natural capital and associated ecosystem services an increase in natural disaster risks and climate change With growing recognition of the need to work with ecosystems to resolve these issues there is now a move towards nature based solutions which involve utilising nature s ecosystem to solve societal challenges while providing multiple co benefits This book systematically reviews nature based solutions from a public policy angle assessing policy developments which encourage the implementation of nature based solutions to address societal challenges while simultaneously providing human well being and biodiversity benefits This includes enhancing sustainable urbanisation restoring degraded ecosystems mitigating and adapting to climate change and reducing risks from natural disasters While nature based solutions can be applied strategically and equitably to help societies address a variety of climatic and non climatic challenges there is still a lack of understanding on how best to implement them The book concludes by providing a best practice guide for those aiming to turn societal challenges into opportunities This book will be of great interest to policymakers practitioners and researchers involved in nature based solutions sustainable urban planning environmental management and sustainable development generally **Diffuse Pollution, Degraded Waters: emerging policy solutions** Organisation for Economic Co-Operation and Development (OECD), 2017-06-15 After decades of regulation and investment to reduce point source water pollution OECD countries still face water quality challenges e g eutrophication from diffuse agricultural and urban sources of pollution that is disperse pollution from surface runoff soil filtration and atmospheric deposition The relative lack of progress reflects the complexities of controlling multiple pollutants from multiple

sources their high spatial and temporal variability associated transactions costs and limited political acceptability of regulatory measures This report outlines the water quality challenges facing OECD countries today presents a range of policy instruments and innovative case studies of diffuse pollution control and concludes with an integrated policy framework to tackle diffuse water pollution An optimal approach will likely entail a mix of policy interventions reflecting the basic OECD principles of water quality management pollution prevention treatment at source the polluter pays and beneficiary pays principles equity and policy coherence
