Environments: Going beyond the Quietness Francesco Aletta,Jian Kang,2020-11-04 This book gathers 14 original contributions published in an IJERPH Special Issue that deal with the perception of environmental sounds and how such sounds are likely to affect human quality of life and well being and the experience of a place The research focus over the years has been gradually shifting from treating sound simply as noise and something that cities should get rid of to a potential resource to promote and support community life in public spaces Three main topics or needs to be addressed by researchers and practitioners emerged from this Special Issue 1 the need to re think quietness in cities as something that goes beyond the mere pursuit of silence 2 the need to integrate additional contextual factors in the characterization and management of urban acoustic environments for public health and 3 the need to consider the acoustic quality of indoor spaces as opposed to an outdoor only perspective The contributions collected in this book will hopefully trigger new questions and inform the agenda of future researchers and practitioners in the environmental acoustics domain

Predicting Outdoor Sound Keith Attenborough,Timothy Van Renterghem,2021-03-03 The second edition of Predicting Outdoor Sound is an up to date reference on the propagation of sound close to the ground and its prediction New content includes comparisons between predictions and data for road traffic railway and wind turbine noise descriptions of source characteristics in the HARMONOISE model propagation over rough seas parallel low walls and lattices outlines of numerical methods gabion caged stones and sonic crystal noise barriers meteorological effects on noise barrier performance and the prediction requirements for auralization The book brings together relevant theories prediction schemes and data thereby providing a basis for determining what model or scheme might be applicable for any situation It also offers a background on useful analytical approximations and the restrictions as well as difficulties and limitations associated with engineering

prediction schemes The text should be of considerable interest to researchers in outdoor sound propagation and more generally it should provide a comprehensive primer on the topic for lecturers consultants and students in acoustics and noise control **Nature Based Strategies for Urban and Building Sustainability** Gabriel Perez,Katia Perini,2018-02-14
