different telescopes I have spent many hours searching the skies for interesting objects using Meade's Autostar Goto facility. My motivation to write a book about the LXD Goto telescope series first came from comments about an LXD55 AR 6 Refractor review that was published on the LXD55.com website. From then on I have had regular emails from people asking technical questions about the telescope and which model is best suited for them. Whilst attending Star parties in the UK I found that many LXD owners would struggle to use them even at a basic level especially if they have never owned or used an equatorially mounted Goto telescope before. Since the first LXD55 models came out in early 2002 owners have struggled to find useful information to help them use the telescopes to the best advantage. There have been mixed reactions about its quality and performance. Hence this book is directed towards those who are new to Goto and the LXD telescope. **HWM**, 2006-08. Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in depth reviews. **The Difference Electron Nanoscope** Werner Lottermoser, 2017-06-26. This book deals with the difference electron nanoscope DEN whose principles have been invented and realised by the book author. The DEN is based on a smart combination of diffractometric and spectroscopic data and uses a visualisation of three dimensional difference electron densities in our case stemming from 3d orbitals in order to obtain the key quantity involved the electric field gradient efg. However the DEN is no machine as the title of the book might infer. It is a computer program running on a fast computer system displaying 3D difference electron hyperareas floating in space and the relevant efg as a wire frame model within the unit cell of the sample involved. In this sense it acts on a sub nanometer scale hence the term nanoscope and generates images of unparalleled symmetrical and physical evidence and beauty. For the first time diffractometry and spectroscopy have been integrated for the common synergetic effects that may contribute to a better understanding of electric and magnetic interactions in a crystal. The experimental derivation of the common quantity the efg is not confined to iron containing samples as the use of Mossbauer spectroscopy might infer but can also be determined by nuclear quadrupole resonance that is not confined to special nuclides. Hence the DEN can be applied to a huge multitude of scientifically interesting specimens since the main method involved diffractometry in a wide sense has no general limitations at all. So it is a rather universal method and the monograph might contribute to a wide distribution of the method in the scientific world. Has anyone seen a real orbital before a real orbital distribution in a crystal unit cell together with its efg tensor ellipsoid. In this book one can see it. *Sport Diver*, 2007-01. *Sport Diver*, 2007-03. *Fathoms*, **HWM**, 2006-08.
