The Evolutionary Limits of Liberalism Filipe Nobre Faria, 2019-11-01 This book assesses the evolutionary sustainability of liberalism The book's central claim is that liberal institutions ultimately weaken their social groups in the evolutionary process of inter group competition In this sense institutions relying on the liberal satisfaction of preferences reveal maladaptive tendencies Based on the model of multilevel selection this work appraises the capacity of liberal democracy and free markets to satisfy preferences In particular the book re evaluates public choice theory's classic postulate that free markets are a suitable alternative to the shortcomings of western liberal democracies regarding preference satisfaction Yet the book concludes that free markets are not a solution to the problems of liberal democracy because both market and democratic liberal institutions rest on the liberal satisfaction of preferences an ethic which hurts group evolutionary fitness This volume is of interest to political theorists evolutionary ethicists political economists and to general readers interested in the future of liberalism

Essays on the Evolutionary-Synthetic Theory of Language Alexey Koshlev, 2020-04-14 This book implements a multidisciplinary approach in describing language both in its ontogenetic development and in its close interrelationship with other human subsystems such as thought memory and activity with a focus on the semantic component of the evolutionary synthetic theory The volume analyzes among others the mechanisms for grammatical polysemy and brings to light the structural unity of artefact and natural concepts such as CHAIR ROAD LAKE RIVER TREE Additionally object and motor concepts are defined in terms of the language of thought and their representation in neurobiological memory codes is discussed finally the hierarchic structure of basic meanings of concrete nouns is shown to arise as a result of their step by step development in ontogeny

Human Evolutionary Psychology Louise Barrett,Robin Dunbar,John Lycett,2002-02-17 Why do people resort to plastic surgery to look young Why are stepchildren at greatest risk of fatal abuse Why do we prefer gossip to algebra Why must Dogon wives live alone in a dark hut for five days a month Why are young children good at learning language but not sharing Over the past decade psychologists and behavioral ecologists have been finding answers to such seemingly unrelated questions by applying an evolutionary perspective to the study of human behavior and psychology Human Evolutionary Psychology is a comprehensive balanced and readable introduction to this burgeoning field It combines a sophisticated understanding of the basics of evolutionary theory with a solid grasp of empirical case studies Covering not only such traditional subjects as kin selection and mate choice this text also examines more complex understandings of marriage practices and inheritance rules and the way in which individual action influences the structure of societies and aspects of cultural evolution It critically assesses the value of evolutionary explanations to humans in both modern Western society and traditional preindustrial societies And it fairly presents debates within the field identifying areas of compatibility among sometimes competing approaches Combining a broad scope with the more in depth knowledge and sophisticated understanding needed to approach the primary literature this text is the ideal introduction to the exciting and rapidly expanding study of human evolutionary psychology

Calvin,2014-11-25 If you're good at finding the one right answer to life's multiple choice questions you're smart But intelligence is what you need when contemplating the leftovers in the refrigerator trying to figure

out what might go with them or if you're trying to speak a sentence that you've never spoken before As Jean Piaget said intelligence is what you use when you don't know what to do when all the standard answers are inadequate This book tries to fathom how our inner life evolves from one topic to another as we create and reject alternatives Ever since Darwin we've known that elegant things can emerge indeed self-organize from simpler beginnings And says theoretical neurophysiologist William H Calvin the bootstrapping of new ideas works much like the immune response or the evolution of a new animal species except that the brain can turn the Darwinian crank a lot faster on the time scale of thought and action Drawing on anthropology evolutionary biology linguistics and the neurosciences Calvin also considers how a more intelligent brain developed using slow biological improvements over the last few million years Long ago evolving jack of all trades versatility was encouraged by abrupt climate changes Now evolving intelligence uses a nonbiological track augmenting human intelligence and building intelligent machines

Principles of Biology Ray Arters, Biology stands as the scientific study of life itself encompassing the remarkable diversity of living organisms that inhabit our planet and the fundamental processes that sustain them At its core biology seeks to understand what distinguishes living systems from non-living matter how life emerged from chemical processes and how the complexity we observe in biological systems arises from relatively simple underlying principles The nature of life has fascinated humanity throughout history driving scientific inquiry that has revealed the extraordinary unity underlying biological diversity and the elegant mechanisms that enable organisms to grow reproduce respond to their environment and evolve over time Defining life presents both philosophical and practical challenges as the boundary between living and non-living systems can sometimes appear blurred However certain characteristics consistently emerge as hallmarks of living systems Living organisms exhibit organization at multiple hierarchical levels from the molecular components within cells to complex ecosystems containing thousands of interacting species This organization is not static but dynamic maintained through constant energy input and molecular turnover that enables organisms to maintain their structure and function despite the natural tendency toward disorder described by thermodynamics The cellular basis of life represents one of the most fundamental principles in biology establishing that all living organisms are composed of one or more cells that serve as the basic units of life This cell theory developed in the nineteenth century through the work of scientists like Matthias Schleiden Theodor Schwann and Rudolf Virchow revolutionized biological thinking by providing a unifying framework for understanding life at its most basic level Cells represent the smallest units that can be considered truly alive possessing all the characteristics necessary for independent existence including the ability to maintain homeostasis respond to stimuli and reproduce

Change, Transformation and Development J. Stan Metcalfe, Uwe Cantner, 2012-12-06 For as long as one can remember the edifice of the neoclassical economic synthesis has been under attack Critiques have focused on the extreme unreality of the assumptions that underpin the Arrow-Debreu theorems of welfare economics They have queried the excessive formalism of the edifice and the lack of

practical significance of many of the results They have castigated the neoclassical synthesis for its internal incoherence lacking an independent theory of capital for example one of the favorite topics of the Cambridge school its lack of a dynamic element its non evolutionary character its lack of any conception of market process and so the list could be continued Blaug 1997 Through all this the neoclassical synthesis remains as strong as ever impervious it seems to these or any other attacks In this paper a different tack is taken The neoclassical edifice is left alone standing as a representation of what goes on in a certain kind of economy namely the economy where goods and services are produced and exchanged The paper then introduces another kind of economy namely an economy of productive entities called resources that are needed to produce the economy of goods and services
