

Model P91PA Poweractor Power Positioner

The P91PA Poweractor Power Positioner provides fast, sensitive, and precise positioning of pneumatic cylinders, springless diaphragm actuators, and similar devices used with large size control valves.

INTRODUCTION

This power positioner is a pneumatic, force-balance instrument that is used to position equipment such as cylinder-operated valves, louvers, and variable-speed devices. The position is directly proportional to the output pressure of a pneumatic controller. The positioner's main function is to overcome the effect of friction and process line pressure on the operation of the valve or similar apparatus.

The output pressure from the controller is applied to the bellows in the positioner, and not to the cylinder. A separate supply of high-pressure air, connected to the pilot valve assembly, is used to operate the cylinder.

For any given controller output, there is but one corresponding position of the cylinder piston. For the slightest increase in controller output, full supply pressure is available to ensure immediate and accurate positioning of the cylinder piston.

HIGH POWERED DEVICE

Output pressures up to 1035 kPa (150 psi) provide the power required for tough applications. For example, approximately 75 kN (16 500 lb) of force is provided with a 750 kPa (110 psi) on a 356 mm (14 in) bore cylinder.
