Africa from MIS 6-2 Sacha C. Jones, Brian A. Stewart, 2016-03-04 Bringing together archaeological, paleoenvironmental, paleontological, and genetic data, this book makes a first attempt to reconstruct African population histories from our species' evolution to the Holocene. Africa during Marine Isotope Stages MIS 6 to 2 (190,000 to 12,000 years ago) witnessed the biological development and behavioral florescence of our species. Modern human population dynamics, which involved multiple population expansions, dispersals, contractions, and extinctions, played a central role in our species' evolutionary trajectory. So far, the demographic processes, modern human population sizes, distributions, and movements that occurred within Africa during this critical period have been consistently under-addressed. The authors of this volume aim at: 1) examining the impact of this glacial-interglacial cycle on human group sizes, movements, and distributions throughout Africa; 2) investigating the macro and micro evolutionary processes underpinning our species' anatomical and behavioral evolution; and 3) setting an agenda whereby Africa can benefit from and eventually contribute to the increasingly sophisticated theoretical and methodological palaeodemographic frameworks developed on other continents.
