Problems in Applied Mathematics Murray S. Klamkin, 1990-01-01 People in all walks of life and perhaps mathematicians especially delight in working on problems for the sheer pleasure of meeting a challenge The problem section of SIAM Review has always provided such a challenge for mathematicians The section was started to offer classroom instructors and their students as well as other interested problemists a set of problems solved or unsolved illustrating various applications of mathematics In many cases the unsolved problems were eventually solved Problems in Applied Mathematics is a compilation of 380 of SIAM Review s most interesting problems dating back to the journal s inception in 1959 The problems are classified into 22 broad categories including Series Special Functions Integrals Polynomials Probability Combinatorics Matrices and Determinants Optimization Inequalities Ordinary Differential Equations Boundary Value Problems Asymptotics and

Rules of the Mind John R. Anderson,2014-01-14 Related to the earlier well known ACT production system theory this book s basic goal is to present evidence for the psychological reality of a production system model of mind Distinguished from the original theory in three ways this volume uses the rational analyses of Anderson 1990 to improve upon that theory and extend its scope It also relates the theory to a great deal of new data on the performance and acquisition of cognitive skills The new theory ACT R involves a neurally plausible implementation of a production system architecture Rational analysis is used to structure and parameterize the system to yield optimal information processing The theory is applicable to a wide variety of research disciplines including memory problem solving and skill acquisition Using intelligent tutors much of the data is concerned with the acquisition of cognitive skills The book provides analyses of data sets describing the extended course of the acquisition of mathematical and computer programming skills
