Breaking the Unbreakable Jonathan Jogenfors,2017-10-23 In this thesis we study device independent quantum key distribution based on energy time entanglement This is a method for cryptography that promises not only perfect secrecy but also to be a practical method for quantum key distribution thanks to the reduced complexity when compared to other quantum key distribution protocols However there still exist a number of loopholes that must be understood and eliminated in order to rule out eavesdroppers We study several relevant loopholes and show how they can be used to break the security of energy time entangled systems Attack strategies are reviewed as well as their countermeasures and we show how full
