*Environmental and Functional Engineering of Agricultural Buildings* H. Barre,2012-12-06 This book has been written as a textbook for students seeking a professional degree in agricultural engineering The authors believe that for students with this objective the course of study should be primarily analytical rather than descriptive and that the analytical approach should apply not only to ideas but also to quantitative procedures and computations We recognize that sound analysis particularly in applied fields is based on the understanding of theoretical principles and on knowledge of many practical considerations We have tried to maintain a good balance between the preparation of theory and practice but we favor emphasis of theoretical considerations on the basis that they usually are not mastered except in an organized course of study whereas practical knowledge is more easily assimilated To present both theory and practice makes heavy demands on class time and textbook space For this reason it has been possible to treat in detail only a few typical environmental systems for livestock housing and storing agricultural products as a means of illustrating methods of analysis and the application of principles It is presumed however that such study will prepare the student for work with other types of structures

**Design of Devices and Systems** William H. Middendorf,2017-12-19 Details the product and system design process from conceptual economic and ethical considerations to modeling decision making and testing Enables engineering educators to satisfy the requirements of the Accreditation Board for Engineering and Technology ABET for the design component of
