Envision Math For First Grade Topic 3:

Expanding the Numerical Central Conceptual Structure Laura Christine Bofferding, 2011 In working with integers students have difficulties that may extend into middle school and even adulthood However even young children can display insights into negative numbers well before receiving formal instruction Using a pre test instruction post test design this study explores how 61 first graders reason about negative number properties and operations and how their understanding changes depending on the instruction they receive Results of the study indicate that children build on their existing whole number understanding to develop a central conceptual structure for integers Furthermore the process by which they extend their numerical central conceptual structure differs among students their initial schemas together with the form of the integer instruction influence how they reason about and solve integer addition and subtraction problems These results highlight the need to revisit the placement duration and content of integer instruction in curricula

Foreword **INDIES Book of the Year Awards Winner** **Transforming Schools Using Project-Based Learning, Performance Assessment, and Common Core Standards** Bob Lenz, Justin Wells, Sally Kingston, 2015-01-27. It's not what students know but what they do with what they know that is important. Schools are changing in response to this reality, and in **Transforming Schools Using Project-Based Learning, Performance Assessment, and Common Core Standards**, Bob Lenz, Justin Wells, and Sally Kingston draw on the example of the Envision Education schools, as well as other leading schools around the country, to show how the concept of deeper learning can meet the need for students who are both college- and career-ready and engaged in their own education. In this book, the authors explain how project-based learning can blend with Common Core-aligned performance assessment for deeper learning. You'll discover how many schools have successfully made the transition from traditional teacher-centered learning to project-based deeper learning and find many practical ideas for implementation. Companion DVD and website include videos showing how to implement deeper learning strategies in the classroom. Evidence-based descriptions show why deeper learning is right for students. Performance assessment experts explain how to align assessments with Common Core by shifting the emphasis from knowing to doing. Extensive game plan section provides step-by-step guidance for change. Schools are complex organizations, and transformation involves all of the stakeholders, from students to superintendents. But as this book shows, there are amazing benefits to be realized when everyone commits to diving deeper into learning.

International Perspectives on Gender and Mathematics Education Olof Steinhorsdottir, Helen J. Forgasz, Joanne Rossi Becker, Kyeonghwa Lee, 2010-06-01 Why a book on gender issues in mathematics in the 21st century Several factors have influenced the undertaking of this project by the editors First an international volume focusing on gender and mathematics has not appeared since publication of papers emerging from the 1996 International Congress on Mathematical Education Keitel 1998 Surely it was time for an updated look at this critical area of mathematics education Second we have had lively discussion and working groups on gender issues at conferences of the International Group for the Psychology of Mathematics Education PME for the past four years sessions at which stimulating and ground breaking research has been discussed by participants from many different countries Some publication seemed essential to share this new knowledge emerging from a wider variety of countries and from different cultural perspectives Third some western countries such as Australia and the USA have experienced in recent years a focus on the boy problem with an underlying assumption that issues of females and mathematics have been solved and are no longer worthy of interest Thus it seemed timely to look more closely at the issue of gender and mathematics internationally When the idea for this volume first emerged invitations were issued to those regularly attending the working and discussion groups at PME Potential authors were charged to focus on gender issues in mathematics and were given wide scope to hone in on the issues that were central to their own research efforts or were in receipt or in need of close attention in their own national or regional contexts

[Handbook of Research on Educational Communications and Technology](#) J. Michael Spector, M. David Merrill, Jan Elen, M. J. Bishop, 2013-07-03 The 4th edition of the Handbook of Research on Educational Communications and

Technology expands upon the previous 3 versions providing a comprehensive update on research pertaining to new and emerging educational technologies. Chapters that are no longer pertinent have been eliminated in this edition with most chapters being completely rewritten, expanded and updated. Additionally, new chapters pertaining to research methodologies in educational technology have been added due to expressed reader interest. Each chapter now contains an extensive literature review documenting and explaining the most recent outstanding research, including major findings and methodologies employed. The Handbook authors continue to be international leaders in their respective fields; the list is cross-disciplinary by design and great effort was taken to invite authors outside of the traditional instructional design and technology community.

Making Teaching and Learning Matter Judith Summerfield, Cheryl C. Smith, 2010-12-09. This volume captures the spirit of collaboration and innovation that its authors bring into the classroom as well as to groundbreaking undergraduate programs and initiatives. Coming from diverse points of view and twenty different disciplines, the contributors illuminate the often perplexing debates about what matters most in higher education today. Each chapter tells a unique story about creating vital pedagogical arenas that have the potential to transform teaching and learning for both faculty and students. These exploratory spaces include courses under construction, cross-college and interdisciplinary collaborations, general education reform initiatives and fresh perspectives on student support services, faculty development, freshman learning communities, writing across the curriculum, on-line degree initiatives and teaching and learning centers. All these spaces lend shape to an overarching system-wide project bringing together the often disconnected silos of undergraduate education at The City University of New York (CUNY), America's largest urban public university system. Since 2003, the University's Office of Undergraduate Education has sponsored coordinated efforts to study and improve teaching and learning for the system's 260,000 undergraduates enrolled at 18 distinct colleges. The contributors to this volume present a broad spectrum of administrative and faculty perspectives that have informed the process of transforming the undergraduate experience. Combined, the voices in these chapters create a much-needed exploratory space for the interplay of ideas about how teaching and learning need to matter in evolving notions of higher education in the twenty-first century. In addition, the text has wider social relevance as an in-depth exploration of change and reform in a large public institution.
