continue to attract the interest of researchers after more than half a century since the seminal work of Ulam and Von Neumann. The ACRI series of conferences has the ambition of being an internationally renowned forum for all those interested in the theory and applications of cellular systems. The contributions collected in this volume concern cellular automata in various fields such as theory, implementations and applications. In addition, several fields of research, e.g. the multi-agent approach, adopt methodologies that show similarities to cellular automata but without the label Cellular Automata. Therefore one of our intentions was to enlarge the cellular automata community to include new related techniques.
