Northam, 1888 **Computer Vision and Mathematical Methods in Medical and Biomedical Image Analysis** Milan Sonka, Ioannis A. Kakadiaris, Jan Kybic, 2004-09-20 Medical imaging and medical image analysis are rapidly developing. While medical imaging has already become a standard of modern medical care, medical image analysis is still mostly performed visually and qualitatively. The ever increasing volume of acquired data makes it impossible to utilize them in full. Equally important, the visual approaches to medical image analysis are known to suffer from a lack of reproducibility. A significant research effort is devoted to developing algorithms for processing the wealth of data available and extracting the relevant information in a computerized and quantitative fashion. Medical imaging and image analysis are interdisciplinary areas combining electrical computer and biomedical engineering, computer science, mathematics, physics, statistics, biology, medicine, and other fields. Medical imaging and computer vision interestingly enough have developed and continue developing somewhat independently. Nevertheless, bringing them together promises to be the best of both of these fields. We were enthusiastic when the organizers of the 2004 European Conference on Computer Vision (ECCV) allowed us to organize a satellite workshop devoted to medical image analysis.
