The Emerging Discipline of Quantitative Systems Pharmacology Tarek A. Leil, Sergey Ermakov, 2015-09-07 In 2011 the National Institutes of Health NIH in collaboration with leaders from the pharmaceutical industry and the academic community published a white paper describing the emerging discipline of Quantitative Systems Pharmacology QSP and recommended the establishment of NIH supported interdisciplinary research and training programs for QSP QSP is still in its infancy but has tremendous potential to change the way we approach biomedical research QSP is really the integration of two disciplines that have been increasingly useful in biomedical research Systems Biology and Quantitative Pharmacology Systems Biology is the field of biomedical research that seeks to understand the relationships between genes and biologically active molecules to develop qualitative models of these systems and Quantitative Pharmacology is the field of biomedical research that seeks to use computer aided modeling and simulation to increase our understanding of the pharmacokinetics PK and pharmacodynamics PD of drugs and to aid in the design of pre clinical and clinical experiments The purpose of QSP modeling is to develop quantitative computer models of biological

systems and disease processes and the effects of drug PK and PD on those systems QSP models allow testing of numerous potential experiments in silico to eliminate those associated with a low probability of success avoiding the potential costs of evaluating all of those failed experiments in the real world At the same time QSP models allow us to develop our understanding of the interaction between drugs and biological systems in a more systematic and rigorous manner As the need to be more cost efficient in the use of research funding increases biomedical researchers will be required to gain the maximum insight from each experiment that is conducted This need is even more acute in the pharmaceutical industry where there is tremendous competition to develop innovative therapies in a highly regulated environment combined with very high research and development R a lack of adequate graduate training programs and the lack of support from government agencies that fund biomedical research However there is an active community of researchers in the pharmaceutical industry the academic community and government agencies that develop QSP and quantitative systems biology models and apply them both to better characterize and predict drug pharmacology and disease processes as well as to improve efficiency and productivity in pharmaceutical R D
