Twenty Years of Education Transformation in Gauteng 1994 to 2014 Maringe, Felix, Prew, Martin, 2015-05-05 Twenty Years of Education Transformation in Gauteng 1994 to 2014 An Independent Review presents a collection of 15 important essays on different aspects of education in Gauteng since the advent of democracy in 1994 These essays talk to what a provincial education department does and how and why it does these things whether it be about policy resourcing or implementing projects Each essay is written by one or more specialist in the relevant focus area. The book is written to be accessible to the general reader as well as being informative and an essential resource for the specialist reader It sheds light on aspects of how a provincial department operates and why and with what consequences certain decisions have been made in education over the last 20 turbulent years both nationally and provincially There has been no attempt to fit the book s chapters into a particular ideological or educational paradigm and as a result the reader will find differing views on various aspects of the Gauteng Department of Education's present and past We leave the reader to decide to what extent the GDE has fulfilled its educational mandate over the last 20 years South African Pressclips ,1991 Sub-Saharan Africa ICT Education Richard J. educators experience high levels of both voluntary and constrained mobility The contributions to Education and Migration address issues pertaining to migration related education from a variety of ethical and philosophical perspectives including analytic applied ethics continental philosophy care ethics Hegelian philosophy the capability approach and theories of distributive justice Distinguished scholars as well as younger researchers from a variety of disciplines educational scholars lawyers philosophers psychologists and sociologists tackle in these eight essays core issues in the ethics and political philosophy of education such as citizenship education or justice in access to education from a perspective that takes human mobilities into account The collection puts a special emphasis on the diversity of migratory experiences on the significance of education for citizens and non citizen migrants long term residents and undocumented children immigrants and return migrants This book was originally published as a special issue of Journal of Global Ethics *You and Your Rights* ,1992

sample problems Based on sound fundamental theory the textbook leads to a practical consideration of soil as a living system in nature and illustrates the influences of human activity upon soil structure and function Students as well as other readers will better understand the importance of soils and the pivotal possition they occupy with respect to careful and knowledgeable conservation Written in an engaging and clear style posing and resolving issues relevant to the terrestrial environment Explores the gamut of the interactions among the phases in the soil and the dynamic interconnection of the soil with the subterranean and atmospheric domains Reveals the salient ideas approaches and methods of environmental soil physics Includes numerous illustrative exercises which are explicitly solved Designed to serve for classroom and laboratory instruction for self study and for reference Oriented toward practical problems in ecology field scale hydrology agronomy and civil engineering Differs from earlier texts in its wider scope and holistic environmental conception Soil Physics T. J. Marshall, J. W. Holmes, C. W. Rose, 1996-05-31 Now in its third edition this textbook gives a comprehensive account of soil physics with emphasis on field applications for students and research workers engaged in water resources studies soil sciences and plant sciences The authors have added chapters on soil erosion conservation and the role of soil in affecting water quality to this new edition The book gives an account of how water influences the structure and strength of soil how plants absorb water from soils how water from rain and irrigation enters the soil and flows through it to contribute to stream flow and flow in artificial drains how soluble salts and chemical pollutants are transported how soils are eroded by water and wind and how the evaporation rate from the land surface is influenced by soil water supply the nature of the plant cover and the evaporative power of the atmosphere This book will be useful to students and research workers in environmental sciences hydrology agriculture soil science and civil engineering Soil Physics with Python Marco Bittelli, Gaylon S. Campbell, Fausto Tomei, 2015 This innovative study presents concepts and problems in soil physics and provides solutions using original computer programs It provides a close examination of physical environments of soil including an analysis of the movement of heat water and gases The authors employ the programming language Python which is now widely used for numerical problem solving in the sciences In contrast to the majority of the literature on soil physics this text focuses on solving not deriving differential equations for transport Using numerical procedures to solve differential equations allows the solution of quite difficult problems with fairly simple mathematical tools Numerical methods convert differential into algebraic equations which can be solved using conventional methods of linear algebra Each chapter introduces a soil physics concept and proceeds to develop computer programs to solve the equations and illustrate the points made in the discussion Problems at the end of each chapter help the reader practise using the concepts introduced The text is suitable for advanced undergraduates graduates and researchers of soil physics It employs an open source philosophy where computer code is presented explained and discussed and provides the reader with a full understanding of the solutions Once mastered the code can be adapted and expanded for the user's own models fostering further developments.
