The Electro-Voice N/D157SB is a Single-D cardioid dynamic microphone utilizing a revolutionary neodymium alloy to form the EV-exclusive N/DYM[®] magnet with four times the power potential of conventional microphone magnets. The exceptional sensitivity of the N/D157SB combined with the inherently low noise of a dynamic transducer insures a superior signal-to-noise ratio ready for video recording and sampling.

For vocal applications where the microphone is used close up, the N/D157SB exhibits bass boost (proximity effect) that vocalists really appreciate. The high-frequency performance of the N/D157SB has been especially shaped for clean, clear, open sound that cuts through background noise. The low-frequency bass boost plus high-frequency response shaping create a natural sounding microphone.

The directional polar characteristic resists feedback when working close to sound reinforcement speakers and monitors. A built-in blast filter enables close talking or singing without worry of "P-popping" or other excessive breath and sibilant noise. A built-in elastomeric shock mount significantly reduces mechanical noise produced by handling or stand-induced vibration.

The N/D157SB is equipped with an on or off switch that shorts the microphone element when set to the "off" position, allowing the user to have local muting control.
