*Finance Policy for Renewable Energy and a Sustainable Environment* Michael Curley, 2014-03-18 This book explains how environmental projects and improvements are achieved through the imposition of regulations on the one hand and financial incentives on the other. It discusses how those incentives can be organized to achieve the greatest environmental benefits at the lowest possible cost to the public. It presents the best environmental finance policies for the financing of alternative energy projects so that the ultimate cost of delivered power will decline. It also examines the challenges of the next generation of environmental programs. Environmental Change and Security Project Report, 1998 **Quantitative**

**Reasoning in the Context of Energy and Environment** Robert Mayes, James Myers, 2015-01-19 This book provides professional development leaders and teachers with a framework for integrating authentic real world performance tasks into science, technology, engineering, and mathematics (STEM) classrooms. We incorporate elements of problem-based learning to engage students around grand challenges in energy and environment. Place-based learning to motivate students by relating the problem to their community and Understanding by Design to ensure that understanding key concepts in STEM is the outcome. Our framework has as a basic tenet interdisciplinary STEM approaches to studying real world problems. We invited professional learning communities of science and mathematics teachers to bring multiple lenses to the study of these problems, including the sciences of biology, chemistry, earth systems, and physics, technology, through data collection tools and computational science modeling approaches, engineering design, around how to collect data and mathematics through quantitative reasoning. Our goal was to have teachers create opportunities for their students to engage in real world problems impacting their place, problems that could be related to STEM grand challenges, demonstrating the importance and utility of STEM. We want to broaden the participation of students in STEM, which both increases the future STEM workforce, providing our next generation of scientists, technologists, engineers, and mathematicians, as well as producing a STEM literate citizenry that can make informed decisions about grand challenges that will be facing their generation. While we provide a specific example of an interdisciplinary STEM module, we hope to do more than provide a single fish. Rather, we hope to teach you how to fish so you can create modules that will excite your students. **Standards-based Activities with Scoring**
