Circular Economy Implementation for Sustainability in the Built Environment Cobîrzan, Nicoleta, Muntean, Radu, Felseghi, Raluca-Andreea, 2023-10-03 The construction sector plays an essential role in the global economy using many exhaustible natural resources most of which are renewable in low percentages Moving towards a circular economy is essential because optimizing the consumption of materials and energy contributes to the development of an economic system that is independent more competitive and more resilient in the face of economic and social crises and various environmental factors The current take make and dispose model of the economy is unsustainable so a shift in thinking towards a circular economy is necessary This circular economy is an economic model that minimizes the use of natural resources by selecting them intelligently and minimizing the use of raw materials favoring the use of recyclable materials wherever possible while managing the resources used and maintaining and reusing them in the economic system for as long as possible Circular Economy Implementation for Sustainability in the Built Environment emphasizes the need to implement a circular economy model in the built environment and how to create a system that optimizes the use of resources and construction materials while preserving their properties and values Covering topics such as automobile industries lean manufacturing and operation strategy this premier reference source is an excellent resource for engineers construction managers business leaders urban planners students and educators of higher education researchers and academicians *Qualitative Reasoning about Physical Systems* Daniel G Bobrow, 2012-12-02 This volume brings together current work on qualitative reasoning Its publication reflects the maturity of qualitative reasoning as a research area and the growing interest in problems of reasoning about physical systems The papers present knowledge bases for a number of very different domains including heat flow transistors and digital computation A common theme of all these papers is explaining how physical systems work An important shared criterion is that the behavioral description must be compositional that is the description of a system's behavior must be derivable from the structure of the system This material should be of interest to anyone concerned with automated reasoning about the real physical world

Circular Economy in Emergency Housing: Eco-Efficient Prototype Design for Subaşı Refugee Camp in Turkey and Maicao Refugee Camp in Colombia Pilar Mercader-Moyano, Paula Porras-Pereira, 2023-07-04 In recent years there has been an upsurge in the number of forced displacements due to natural disasters armed conflicts and pandemics which has favoured an increase in the number of temporary accommodations Although the provision of shelter after an emergency situation is one of the priorities of humanitarian aid the reality is that the conditions in which people live in a situation of forced displacement are absolutely precarious and overcrowded Nowadays this type of housing tends to have a short lifespan deepening the environmental impact and the generation of waste Likewise added to this great problem is the linear economic system implemented worldwide which also causes a high rate of waste This investigation develops an eco efficient design protocol that determines the basic premises in any

emergency situation therefore avoiding the precarious nature to which those in forced displacement are exposed Moreover the research investigates different constructive solutions that can respond to situations of natural catastrophes or humanitarian disasters where emergency housing is needed as well as the possible alternatives from the point of view of circular economy Eco efficient and environmentally correct solutions are sought which can be adaptable to the different scenarios where emergency housing may be needed thus creating a rapid easy functional and environmentally correct architecture adaptable to these types of situations The study shows that the factors that characterize emergency architecture can be an example of where the issues around the sustainability factor are applied in a practical way The main objectives of this study are to develop an eco efficient design protocol which determines the basic premises in any emergency situation and to find eco efficient and environmentally correct solutions adaptable to different scenarios which have similar climatic characteristics and where emergency housing may be needed thus creating a type of ephemeral architecture but sensitive to the user to whom it is intended and in accordance with the optimal conditions of habitability
