American Environmentalism J. Michael Martinez,2013-06-20 Protecting the natural environment and promoting sustainability have become important objectives but achieving such goals presents myriad challenges for even the most committed environmentalist American Environmentalism Philosophy History and Public Policy examines whether competing interests can be reconciled while developing consistent coherent effective public policy to regulate uses and protection of the natural environment without destroying the national economy It then reviews a range of possible solutions The book delves into key normative concepts that undergird American perspectives on nature by providing an overview of philosophical concepts found in the western intellectual tradition the presuppositions inherent in neoclassical economics and anthropocentric human centered and biocentric earth centered positions on sustainability It traces the evolution of attitudes about nature from the time of the Ancient Greeks through Europeans in the Middle Ages and the Renaissance the Enlightenment and the American Founders the nineteenth and twentieth centuries and up to the present Building on this foundation the author examines the political landscape as non governmental organizations NGOs industry leaders and government officials struggle to balance industrial development with environmental concerns Outrageous claims silly misrepresentations bogus arguments absurd contentions and overblown prophesies of impending calamities are bandied about by many parties on all sides of the debate industry spokespeople elected representatives unelected regulators concerned citizens and environmental NGOs alike In lieu of descending into this morass the author circumvents the silliness to explore the crucial issues through a more focused disciplined approach Rather than engage in acrimonious debate over minutiae as so often occurs in the context of green claims he recasts the issue in a way that provides a cohesive look at all sides This effort may be quixotic but how else to cut the Gordian knot   A User Manual for the DIGNAD Toolkit Mr. Zamid Aligishiev,Cian Ruane,Azar Sultanov,2023-06-05 This note is a user s manual for the DIGNAD toolkit an application aimed at facilitating the use of the DIGNAD model Debt Investment Growth and Natural Disasters by economists with no to little knowledge of MATLAB and Dynare via a user friendly Excel based interface DIGNAD is a dynamic general equilibrium model of a small open economy developed at the International Monetary Fund The model can help economists and policymakers with quantitative assessments and policy scenario analysis of the macrofiscal effects of natural disasters and adaptation infrastructure investments in low income developing countries and emerging markets DIGNAD is tailored to disaster prone countries which typically are small countries or low income countries that are particularly exposed to large climate shocks countries where shocks that can disrupt the entire economy are frequent However DIGNAD can be relevant also for larger countries that may potentially be exposed to extreme climatic disasters in the future   **Classical and Modern Optimization Techniques Applied to Control and Modeling** Radu-Emil Precup,Raul-Cristian Roman,Elena-Lorena Hedrea,Alexandra-Iulia Szedlak-Stinean,Iuliu Alexandru Zamfirache,2025-03-25 The book presents a detailed and unified

treatment of the theory and applications of optimization applied to control and modeling focusing on nature inspired optimization algorithms to optimally tune the parameters of linear and nonlinear controllers and models with emphasis on tower crane systems and other representative applications Classical and Modern Optimization Techniques Applied to Control and Modeling combines classical and modern approaches to optimization based on the authors experience in the field and presents in a unified structure the essential aspects of optimization in control and modeling from a control engineer s point of view It covers linear and nonlinear controllers and neural networks based on reinforcement learning are considered and analyzed because of the need to reduce the complexity of the controllers and their design so that they can be practical to implement as low cost automation solutions The chapters are designed to quickly make the concepts of optimization control reinforcement learning and neural networks understandable to readers with limited experience This book is intended for a broad audience including undergraduate and graduate students engineers designers practitioners and researchers and anyone facing challenging control problems *Masonry: Building Pathologies and Design* João M. Olivieri,2018-08-20 This book offers an introductory level guide to the complex field of multivariate analytical calibration with particular emphasis on real applications such as near infrared spectroscopy It presents intuitive descriptions of mathematical and statistical concepts illustrated with a wealth of figures and diagrams and consistently highlights physicochemical interpretation rather than mathematical issues In addition it describes an easy to use and freely available graphical interface together with a variety of appropriate examples and exercises Lastly it discusses recent advances in the field figures of merit detection limit non linear

calibration method comparison together with modern literature references **Investigation of Spatial Control Strategies with Application to Advanced Heavy Water Reactor** Ravindra Munje,Balasaheb Patre,Akhilanand Tiwari,2017-10-13 This book examines the different spatial control techniques for regulation of spatial power distribution in advanced heavy water reactors AHWR It begins with a review of the literature pertinent to the modeling and control of large reactors It also offers a nodal core model based on finite difference approximation since the AHWR core is considered to be divided into 17 relatively large nodes Further it introduces a nonlinear model characterizing important thermal hydraulics parameters of AHWR and integrates it into the neutronics model to obtain a coupled neutronics thermal hydraulics model of AHWR The book also presents a vectorized nonlinear model of AHWR and implements it in MATLAB Simulink environment The model of the reactor is then linearized at the rated power and put into standard state variable form It is characterized by 90 states 5 inputs and 18 outputs Lastly it discusses control techniques for a nonlinear model of AHWR This book will prove to be a valuable resource for professional engineers and implementation specialists researchers and students <u>Handbook of Research on Big Data Storage and Visualization Techniques</u> Segall, Richard S.,Cook, Jeffrey S.,2018-01-05 The digital age has presented an exponential growth in the amount of data available to individuals looking to draw conclusions based on given or collected information across industries Challenges associated with the analysis security sharing storage and visualization of large and complex data sets continue to plague data scientists and analysts alike as traditional data processing applications struggle to adequately manage big data The Handbook of Research on Big Data Storage and Visualization Techniques is a critical scholarly resource that explores big data analytics and technologies and their role in developing a broad understanding of issues pertaining to the use of big data in multidisciplinary fields Featuring coverage on a broad range of topics such as architecture patterns programing systems and computational energy this publication is geared towards professionals researchers and students seeking current research and application topics on the subject
