

## Chapter 2: Cell Biology and Organization

### Basic:

- Cells are basic units of living organisms
- All organisms are made up of one/ more cells
- Cells consist of protoplasm:
  - Made up of cytoplasm & nucleus
  - Surrounded by thin layer: plasma membrane
  - Consist of small structure: organelles [usually can be seen under electron microscope]
  - Example of non-organelle structure in cell: plasma membrane, cytoplasm, cell wall [in plant]
  - Example of organelle structure in cell: nucleus, endoplasmic reticulum, mitochondrion, ribosome, Golgi apparatus, vacuole, chloroplast [plant cell]

### Organelle Component

#### Nucleus

- Control all activities of cell
- Nucleolus: synthesis of ribosome & RNA [ribonucleic acid]
- Chromosome: carry genetic material which is transferred from parent to the offspring
- **Cell without nucleus: mature red blood cell [RBC]**

Figure 1: Nucleus (OpenStax College, 2014, from <https://openstax.org/r/bio101>)

#### Mitochondria

- Site of cellular respiration
- Help oxidize glucose to release energy in the form of ATP [adenosine triphosphate]
- **\*\* Abundance in sperm, muscle, plant meristem cell [in shoot, root tips]**

Figure 1

#### Endoplasmic reticulum

- a) RER [rough endoplasmic reticulum]
- Has ribosome on its surface
  - Synthesize by ribosome
- b) SER [smooth endoplasmic reticulum]
- Smooth surface – no ribosome on its surface
  - Centre for drug detoxification

#### Golgi apparatus

- Help in processing, packaging, transporting macromolecules: protein, carbohydrates

[Analogical Thinking in Architecture](#) Jean-Pierre Chupin, 2023-07-27 This book provides an in depth exploration of the rich and persistent use of analogical thinking in the built environment Since the turn of the 21st century design thinking has permeated many fields outside of the design disciplines It is expected to succeed whenever disciplinary boundaries need to be transcended in order to think outside the box This book argues that these qualities have long been

supported by analogical thinking an agile way of reasoning in which think the unknown through the familiar The book is organized into four case studies the first reviews analogical models that have been at the heart of design thinking representations from the 1960s to the present day the second investigates the staying power of biological analogies the third explores the paradoxical imaginary of analogous cities as a means of integrating contemporary architecture with heritage contexts while the fourth unpacks the critical and theoretical potential of linguistic metaphors and visual comparisons in architectural discourse Comparing views on the role of analogies and metaphors by prominent voices in architecture and related disciplines from the 17th century to the present the book shows how the analogical world of the project is revealed as a wide open field of creative and cognitive interactions These visual and textual operations are explained through 36 analogical plates which can be read as an inter text demonstrating how analogy has the power to reconcile design and theories

**The Living Elephants** Raman Sukumar,2003-09-11 The Living Elephants is the authoritative resource for information on both Asian and African elephants From the ancient origins of the proboscideans to the present day crisis of the living elephants this volume synthesizes the behavior ecology and conservation of elephants while covering also the history of human interactions with elephants all within the theoretical framework of evolutionary biology The book begins with a survey of the 60 million year evolutionary history of the proboscideans emphasizing the role of climate and vegetation change in giving rise to a bewildering array of species but also discussing the possible role of humans in the late Pleistocene extinction of mastodons and mammoths The latest information on the molecular genetics of African and Asian elephants and its taxonomic implications are then presented The rise of the elephant culture in Asia and its early demise in Africa are traced along with an original interpretation of this unique animal human relationship The book then moves on to the social life of elephants as it relates to reproductive strategies of males and females development of behavior in young communication ranging patterns and societal organization The foraging strategies of elephants their impact on the vegetation and landscape are then discussed The dynamics of elephant populations in relation to hunting for ivory and their population viability are described with the aid of mathematical models A detailed account of elephant human interactions includes a treatment of crop depredation by elephants in relation to their natural ecology manslaughter by elephants habitat manipulation by humans and a history of the ivory trade and poaching in the two continents The ecological information is brought together in the final chapter to formulate a set of pragmatic recommendations for the long term conservation of elephants The broadest treatment of the subject yet undertaken by one of the leading workers in the field Raman Sukumar the book promises to bring the understanding of elephants to a new level It should be of interest not only to biologists but also a broader audience including field ecologists wildlife administrators historians conservationists and all those interested in elephants and their future
