

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- [1] Circles are females and squares are males.
- [2] A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of person 1-15. Then answer the questions below the table.

What do you know about the genotype of the mother of 1-1?

These parents (1-1 and 1-2) had a color-blind son (1-4). His dad has no recessive, but color-blind allele. From his mother, since the mother is not shaded, she must be a carrier.

Number 1-3 is colorblind, just like her father. Where could she get her allele for colorblindness?

She inherited her allele for colorblindness from her mother. Must have been 1-1's chromosome. From her father.

Number numbers 1-5 and 1-6 were colorblind. How did they have a colorblind son (1-8)?

Both mother and father are carriers for color blindness.

What must be the genotype of the parents of a colorblind daughter? Explain.

To have a color-blind daughter, she would have to inherit the colorblind allele from each parent. Her father must be $X^c Y$ and mother would have to be $X^c X^c$.

If number 1-1 has a normal son, what is the probability that their son will be colorblind?

$X^N X^N \times X^c Y \rightarrow$ all of their sons will have color-blindness.
