Fukuda,K.L. Reifsnider,G. Bulletin 35 presents the course materials developed for the short course Retrofitting of Concrete Structures through Externally Bonded FRP with emphasis on Seismic Applications given in Ankara and Istanbul in June 2005. The course drew on expertise both from outside Turkey and from the large pool of local experts on this subject. In most countries of the world the building stock is ageing and needs continuous maintenance or repair. Moreover the majority of existing constructions are deficient in the light of current knowledge and design codes. The problem of structural deficiency of existing constructions is especially acute in seismic regions as even there seismic design of structures is relatively recent. The direct and indirect costs of demolition and reconstruction of structurally deficient constructions are often prohibitive; furthermore they entail a substantial waste of natural resources and energy. Therefore structural retrofitting is becoming increasingly widespread throughout the world. Externally bonded Fibre Reinforced Polymers (FRPs) are rapidly becoming the technique of choice for structural retrofitting. They are cleaner and easier to apply than conventional retrofitting techniques, reduce disruption to the occupancy and operation of the facility, do not generate debris or waste and reduce health and accident hazards at the construction site as well as noise and air pollution in the surroundings. Bulletin 35 gives state-of-the-art coverage of retrofitting through FRPs and presents relevant provisions from three recent standardisation milestones: EN 1998-3:2005 Eurocode 8 Design of structures for earthquake resistance Part 3 Assessment and retrofitting of buildings; the 2005 Draft of the Turkish seismic design code and the Italian regulatory document CNR DT 200/04 Instructions for Design Execution and Control of Strengthening Interventions by Means of Fibre Reinforced Composites (2004).
