Design Of Modern Highrise Reinforced Concrete Structures Hiroyuki Aoyama, 2001-12-28 This book presents the results of a Japanese national research project carried out in 1988-1993 usually referred to as the New RC Project. Developing advanced reinforced concrete building structures with high strength and high quality materials under its auspices, the project aimed at promoting construction of highrise reinforced concrete buildings in highly seismic areas such as Japan. The project covered all the aspects of reinforced concrete structures, namely materials, structural elements, structural design, construction, and feasibility studies. In addition to presenting these results, the book includes two chapters giving an elementary explanation of modern analytical techniques, i.e. finite element analysis and earthquake response analysis.

[The Routledge Handbook of People and Place in the 21st-Century City](#) Kate Bishop, Nancy Marshall, 2019-08-13 Increasing urbanization and increasing urban density put enormous pressure on the relationships between people and place in cities. Built environment professionals must pay attention to the impact of people-place relationships in small to large scale urban initiatives. A small playground in a neighborhood pocket park is an example of a small scale urban development; a national environmental policy that influences energy sources is an example of a large scale initiative. All scales of decision making have implications for the people-place relationships present in cities. This book presents new research in contemporary interdisciplinary urban challenges and opportunities and aims to keep the people-place relationship debate in focus in the policies and practices of built environment professionals and city managers. Most urban planning and design decisions, even those on a small scale, will remain in the urban built form for many decades, conditioning people's experience of their city. It is important that these decisions are made using the best available knowledge. This book contains an interdisciplinary discussion of contemporary urban movements and issues influencing the relationship between people and place in urban environments around the world, which have major implications for both the processes and products of urban planning, design, and management. The main purpose of the book is to consolidate contemporary thinking among experts from a range of disciplines, including anthropology, environmental psychology, cultural geography, urban design and planning, architecture, and landscape architecture, and the arts, on how to conceptualize and promote healthy people and place relationships in the 21st century city. Within each of the chapters, the authors focus on their specific areas of expertise, which enable readers to understand key issues for urban environments, urban populations, and the links between them.
