

EXAMPLES OF DOMAINS AND RANGES FROM GRAPHS

Important notes about Domains and Ranges from Graphs:

- Remember that domain refers to the x-values that are represented in a problem and range refers to the y-values that are represented in a problem.
- Sometimes it isn't possible to list all the values that x or y can be because the graph is continuous and made up of an infinite number of points, like a line, a ray, or even a segment.
- In a continuous graph, to determine the domain, you should focus on looking left to right of the graph.
- In a continuous graph, to determine the range, you should focus on looking bottom to top of the graph.
- We use interval notation to help us describe the domain and range for graphs that represent continuous situations.
- Please review the following information to help you describe the domain and range for these different types of continuous graphs.

Example 1: A continuous graph with two endpoints.

Important Notes:

- To find the domain for a graph with two endpoints, always identify the x-values of the point furthest to the left and the point furthest to the right.
- For the range, you want the y-values of the lowest point and the highest point.

Domain: $-7 \leq x < 3$

- Notice that this graph has two endpoints, so the graph starts and stops and the domain covers all x-values between the two endpoints which makes it a continuous graph.
- Since the left and right endpoints are at $(-7, -3)$ and $(3, 1)$, the graph covers all x-values between the x-values of -7 and 3 .
- Notice that the first endpoint is a closed circle so it includes that point, but the second endpoint is an open circle, so it does not include that point.
- Therefore, the graph covers all x-values ≥ -7 AND all x-values < 3 – we write that in interval notation as $[-7 \leq x < 3]$.

Range: $-3 \leq y < 1$

- Notice that this graph has two endpoints, so the graph starts and stops and the range covers all y-values between the two endpoints which makes it a continuous graph.
- Since the bottom and top endpoints are at $(-7, -3)$ and $(3, 1)$, the graph covers all y-values between the y-values of -3 and 1 .
- Notice that the first endpoint is a closed circle so it includes that point, but the second endpoint is an open circle, so it does not include that point.
- Therefore, the graph covers all y-values ≥ -3 AND all y-values < 1 – we write that in interval notation as $[-3 \leq y < 1]$.
