Mathematical Studies on Human Disease Dynamics Abba B. Gumel, Carlos Castillo-Chávez, Ronald E. Mickens, Dominic P. Clemence, 2006 This volume contains the proceedings of the AMS SIAM IMS Joint Summer Research Conference on Modeling the Dynamics of Human Diseases Emerging Paradigms and Challenges held in Snowbird Utah July 17–21 2005. The goal of the conference was to bring together leading and upcoming researchers to discuss the latest advances and challenges associated with the modeling of the dynamics of emerging and re-emerging diseases and to explore various control strategies. The articles included in this book are devoted to some of the significant recent advances, trends, and challenges associated with the mathematical modeling and analysis of the dynamics and control of some diseases of public health importance. In addition to illustrating many of the diverse prevailing epidemiological challenges together with the diversity of mathematical approaches needed to address them, this book provides insights on a number of topical modeling issues such as the modeling and control of mosquito-borne diseases, respiratory diseases, animal diseases such as foot and mouth disease, cancer, and tumor growth modeling, influenza, HIV, HPV, rotavirus, etc. This book also touches upon other important topics such as the use of modeling in

*Developing a 21st Century Global Library for Mathematics Research* National Research Council, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Planning a Global Library of the Mathematical Sciences, 2014-03-25 Like most areas of scholarship, mathematics is a cumulative discipline; new research is reliant on well-organized and well-curated literature. Because of the precise definitions and structures within mathematics today, information technologies and machine learning tools provide an opportunity to further organize and enhance discoverability of the mathematics literature in new ways with the potential to significantly facilitate mathematics research and learning. Opportunities exist to enhance discoverability directly via new technologies and also by using technology to capture important interactions between mathematicians and the literature for later sharing and reuse. *Developing a 21st Century Global Library for Mathematics Research* discusses how information about what the mathematical literature contains can be formalized and made easier to express, encode, and explore. Many of the tools necessary to make this information system a reality will require much more than indexing and will instead depend on community input paired with machine learning where mathematicians' expertise can fill the gaps of automatization. This report proposes the establishment of an organization, the development of a set of platforms, tools, and services, the deployment of an ongoing applied research program to complement the development work, and the mobilization and coordination of the mathematical community to take the first steps toward these capabilities. The report recommends building on the extensive work done by many dedicated individuals under the rubric of the World Digital Mathematical Library as well as many other community initiatives. *Developing a 21st Century Global Library for Mathematics* envisions a combination of machine learning methods and community-based editorial effort that makes a significantly greater portion of the information and knowledge in the

global mathematical corpus available to researchers as linked open data through a central organizational entity referred to in the report as the Digital Mathematics Library This report describes how such a library might operate discussing development and research needs role in facilitating discover and interaction and establishing partnerships with publishers

*Performance-Based Assessment for 21st-Century Skills* Todd Stanley,2021-09-03 Performance based assessments allow classroom teachers an alternative to traditional multiple choice tests We often use fill in the bubble assessments in education to determine the readiness of students However in the 21st century workplace these types of tests fail to truly prepare students How many times in the real world are we called upon to take a multiple choice test In the real world we are called upon to prove our merit through performance based assessments displaying our 21st century skills We should be preparing students for this in the classroom Performance Based Assessment for 21st Century Skills makes the argument that teachers should use performance based assessments in the classroom It guides the educator step by step to show how he or she can create performance based assessments for students including what they look like teaching students how to create them setting the proper classroom environment and how to evaluate them

*Mathematical Oncology 2013* Alberto d'Onofrio,Alberto Gandolfi,2014-10-16 With chapters on free boundaries constitutive equations stochastic dynamics nonlinear diffusion consumption structured populations and applications of optimal control theory this volume presents the most significant recent results in the field of mathematical oncology It highlights the work of world class research teams and explores how different researchers approach the same problem in various ways Tumors are complex entities that present numerous challenges to the mathematical modeler First and foremost

they grow. Thus their spatial mean field description involves a free boundary problem. Second their interiors should be modeled as nontrivial porous media using constitutive equations. Third at the end of anti cancer therapy a small number of malignant cells remain making the post treatment dynamics inherently stochastic. Fourth the growth parameters of macroscopic tumors are non constant as are the parameters of anti tumor therapies. Changes in these parameters may induce phenomena that are mathematically equivalent to phase transitions. Fifth tumor vascular growth is random and self similar. Finally the drugs used in chemotherapy diffuse and are taken up by the cells in nonlinear ways. Mathematical Oncology 2013 will appeal to graduate students and researchers in biomathematics computational and theoretical biology biophysics and bioengineering.
