## RESULTS

Plants in the dark did not grow. Plants under white light grew normal. Plants under red light grew normal. Plants under blue light grew normal. Plants under green light grew normal. Plants under yellow light grew normal. Plants under purple light grew normal.

Weight Change Under Different Lights

## CONCLUSION

My experiment showed that plants need light to grow. I found that plants grow better under white light than under other colors of light. I found that plants grow better under white light than under other colors of light. I found that plants grow better under white light than under other colors of light.

## ABSTRACT

Photosynthesis is a process by which plants use light energy to produce glucose. The purpose of this experiment was to determine the effect of light color on photosynthesis. The results showed that plants grow better under white light than under other colors of light.

## FUTURE CONSIDERATION

My future thought about the growth of plants is to test different colors of light. I want to know how much light plants need to grow. I want to know how much light plants need to grow. I want to know how much light plants need to grow.

Leadership and management are general skills that apply in most walks of life but in the scientific domain they require some special characteristics Science thrives on challenge whether it is the technical challenge of trying to do something which has not been done before or challenging a widely held but poorly supported hypothesis Scientists are trained to challenge and for the manager of science this can itself be a challenge In the past when science was on a much smaller scale and less subject to public scrutiny a less formal back of the envelope management style was acceptable but those days are long gone Science costs much more and is rightly more accountable Excellent scientists however do not necessarily make good managers and may not make good leaders Nevertheless like all skills leadership and management can be enhanced and developed and even instinctively good managers can improve While the science of management and leadership is well developed the management and leadership of science is less so This book aims to introduce the working research scientist to the art and techniques of management and the skills necessary to be a good and effective manager and leader of science and scientists This includes understanding the organization and functioning of scientific research establishments universities laboratories research councils etc and how to deal with the associated committee work recruiting and team building how to deal with difficulties managing projects and handling risks The approach is pragmatic not dogmatic Leadership and management are people skills and each person is different and needs to be treated differently The focus is on the principle and practice While the subject is serious the approach is conversational with anecdotes and practical examples **Private And Public School Partnerships**
