**Chemical and Physical Signatures for Microbial Forensics** John B. Cliff,Helen W. Kreuzer,Christopher J. Ehrhardt,David S. Wunschel,2011-12-09 Combining the disciplines of biological physical and chemical science microbial forensics has a rapidly rising profile in a world increasingly troubled by the threat of biocrime and bioterrorism This valuable resource is a major addition to a body of literature reckoned to lack sufficient breadth It presents a variety of phenotypic and trace signature methodologies associated with cultured microorganisms that despite being genetically identical may be characterized by differing cultural environments One of the central challenges faced by those working in this field is the sheer diversity of potentially harmful agents which in themselves total more than 1000 viruses bacteria fungi and protozoan parasites Their numerous additional variants render the process of fingerprinting biological agents notoriously difficult especially when the limitations of genetic analysis are factored in Attribution of crime is relatively easy through human DNA

but lacking the genetic individuation of humans and animals microbial forensics has to complement phylogenetic techniques with chemical and physical ones In the best case genetic analysis in the biocrime sector can exclude sources narrow the population of possible sources and support associations with potential sources To complement these genetic techniques chemical and physical methods can be used to compare signatures imparted to microbial samples by environments in which they are grown and processed Collating a range of microbiological fingerprinting techniques in one volume and covering everything from statistical analysis to laboratory protocols this publication furthers the aim of forensic investigators who need robust and legally admissible forensic evidence to present in a courtroom
