related measurement systems Mathematical Modelling J. Caldwell, Douglas K.S. Ng, 2006-04-10 Over the past decade there has been an increasing demand for suitable material in the area of mathematical modelling as applied to science engineering business and management Recent developments in computer technology and related software have provided the necessary tools of increasing power and sophistication which have significant implications for the use and role of mathematical modelling in the above disciplines In the past traditional methods have relied heavily on expensive experimentation and the building of scaled models but now a more flexible and cost effective approach is available through greater use of mathematical modelling and computer simulation In particular developments in computer algebra symbolic manipulation packages and user friendly software packages for large scale problems all have important implications in both the teaching of mathematical modelling and more importantly its use in the solution of real world problems Many textbooks have been published which cover the art and techniques of modelling as well as specific mathematical modelling techniques in specialist areas within science and business In most of these books the mathematical material tends to be rather tailor made to fit in with a one or two semester course for teaching students at the undergraduate or postgraduate level usually the former This textbook is guite different in that it is intended to build on and enhance students modelling skills using a combination of case studies and projects Introduction to Infrared and Electro-Optical Systems, Third Edition Ronald G. Driggers, Melvin H. Friedman, John W. Devitt, Orges Furxhi, Anjali Singh, 2022-08-31 This newly revised and updated edition offers a current and complete introduction to the analysis and design of Electro Optical EO imaging systems The Third Edition provides numerous updates and several new chapters including those covering Pilotage Infrared Search and Track and Simplified Target Acquisition Model The principles and components of the Linear Shift Invariant LSI infrared and electro optical systems are detailed in full and help you to combine this approach with calculus and domain transformations to achieve a successful imaging system analysis Ultimately the steps described in this book lead to results in quantitative characterizations of performance metrics such as modulation transfer functions minimum resolvable temperature difference minimum resolvable contrast and probability of object discrimination The book includes an introduction to two dimensional functions and mathematics which can be used to describe image transfer characteristics and imaging system components You also learn diffraction concepts of coherent and incoherent imaging systems which show you the fundamental limits of their performance By using the evaluation procedures contained in this desktop reference you become capable of predicting both sensor test and field performance and quantifying the effects of component variations The book contains over 800 time saving equations and includes numerous analyses and designs throughout It also includes a reference link to special website prepared by the authors that augments the book in the classroom and serves as an additional resource for practicing engineers With its comprehensive coverage and practical approach this is a strong resource for engineers needing a bench reference for sensor and basic scenario performance calculations Numerous analyses and designs are given throughout the
