Modelling of Big Data in Finance provides a rigorous overview and exploration of stochastic modelling of big data in finance BDF The book describes various stochastic models including multivariate models to deal with big data in finance This includes data in high frequency and algorithmic trading specifically in limit order books LOB and shows how those models can be applied to different datasets to describe the dynamics of LOB and to figure out which model is the best with respect to

a specific data set The results of the book may be used to also solve acquisition liquidation and market making problems and other optimization problems in finance Features Self contained book suitable for graduate students and post doctoral fellows in financial mathematics and data science as well as for practitioners working in the financial industry who deal with big data All results are presented visually to aid in understanding of concepts Dr Anatoliy Swishchuk is a Professor in Mathematical Finance at the Department of Mathematics and Statistics University of Calgary Calgary AB Canada He got his B Sc and M Sc degrees from Kyiv State University Kyiv Ukraine He earned two doctorate degrees in Mathematics and Physics PhD and DSc from the prestigious National Academy of Sciences of Ukraine NASU Kiev Ukraine and is a recipient of NASU award for young scientist with a gold medal for series of research publications in random evolutions and their applications Dr Swishchuk is a chair and organizer of finance and energy finance seminar Lunch at the Lab at the Department of Mathematics and Statistics Dr Swishchuk is a Director of Mathematical and Computational Finance Laboratory at the University of Calgary He was a steering committee member of the Professional Risk Managers International Association PRMIA Canada 2006 2015 and is a steering committee member of Global Association of Risk Professionals GARP Canada since 2015 Dr Swishchuk is a creator of mathematical finance program at the Department of Mathematics Statistics He is also a proponent for a new specialization Financial and Energy Markets Data Modelling in the Data Science and Analytics program His research areas include financial mathematics random evolutions and their applications biomathematics stochastic calculus and he serves on editorial boards for four research journals He is the author of more than 200 publications including 15 books and more than 150 articles in peer reviewed journals In 2018 he received a Peak Scholar award

Machine Learning and AI in Finance German Creamer, Gary Kazantsev, Tomaso Aste, 2021-04-06 The significant amount of information available in any field requires a systematic and analytical approach to select the most critical information and anticipate major events During the last decade the world has witnessed a rapid expansion of applications of artificial intelligence AI and machine learning ML algorithms to an increasingly broad range of financial markets and problems Machine learning and AI algorithms facilitate this process understanding modelling and forecasting the behaviour of the most relevant financial variables The main contribution of this book is the presentation of new theoretical and applied AI perspectives to find solutions to unsolved finance questions This volume proposes an optimal model for the volatility smile for modelling high frequency liquidity demand and supply and for the simulation of market microstructure features Other new AI developments explored in this book includes building a universal model for a large number of stocks developing predictive models based on the average price of the crowd forecasting the stock price using the attention mechanism in a neural network clustering multivariate time series into different market states proposing a multivariate distance nonlinear causality test and filtering out false investment strategies with an unsupervised learning algorithm Machine Learning and AI in Finance explores the most recent advances in the application of innovative machine learning and artificial intelligence

models to predict financial time series to simulate the structure of the financial markets to explore nonlinear causality models to test investment strategies and to price financial options The chapters in this book were originally published as a special issue of the Quantitative Finance journal

High Frequency Financial Econometrics Luc Bauwens, Winfried Pohlmeier, David Veredas, 2007-12-31 In this paper we propose a new econometric approach to jointly model the time series dynamics of the trading process and the revisions of ask and bid prices We use this model to test the validity of certain symmetry assumptions very common among microstructure models Namely we test whether ask and bid quotes respond symmetrically to trade related shocks and whether buyer initiated trades and seller initiated trades are equally informative In essence the procedure we propose generalizes Hasbrouck's 1991 vector autoregressive model for signed trades and changes in the quote midpoint by relaxing the implicit symmetry assumptions in his model The properties of the empirical model are derived from a structural dynamic model for ask and bid prices In this model ask and bid prices share a common long run component the efficient price The long term value of the stock varies due to buyer initiated shocks seller initiated shocks and trade unrelated shocks The transitory components of ask and bid prices are characterized by two correlated and trade dependent stochastic processes whose dynamics are allowed to differ The trading process is endogenous Buyer and seller initiated trades are generated by two idiosyncratic but mutually dependent stochastic processes The generating processes of quotes and trades both depend on several exogenous variables that feature the trades and the market conditions

Machine Learning in Finance Matthew F. Dixon, Igor Halperin, Paul Bilokon, 2020-07-01 This book introduces machine learning methods in finance. It presents a unified treatment of machine learning and various statistical and computational disciplines in quantitative finance such as financial econometrics and discrete time stochastic control with an emphasis on how theory and hypothesis tests inform the choice of algorithm for financial data modeling and decision making. With the trend towards increasing computational resources and larger datasets, machine learning has grown into an important skillset for the finance industry. This book is written for advanced graduate students and academics in financial econometrics, mathematical finance, and applied statistics, in addition to quants and data scientists in the field of quantitative finance. *Machine Learning in Finance: From Theory to Practice* is divided into three parts, each part covering theory and applications. The first presents supervised learning for cross-sectional data from both a Bayesian and frequentist perspective. The more advanced material places a firm emphasis on neural networks, including deep learning as well as Gaussian processes, with examples in investment management and derivative modeling. The second part presents supervised learning for time series data, arguably the most common data type used in finance, with examples in trading, stochastic volatility, and fixed income modeling. Finally, the third part presents reinforcement learning and its applications in trading, investment, and wealth management. Python code examples are provided to support the reader's understanding of the methodologies and applications. The book also includes more than 80 mathematical and programming exercises with worked solutions available to instructors. As a bridge to research in this emergent field, the final chapter presents the frontiers of machine learning in finance from a researcher's perspective, highlighting how many well-known concepts in statistical physics are likely to emerge as important methodologies for machine learning in finance.

Technical Innovation in Financial Economics: Advanced Theory, Practice, and Policy Chen, Haojun, 2025-09-08 In economics, technical innovation has transformed the way markets operate and conduct business. With the advancement of computational models, the way businesses reevaluate economic theories has changed and expanded for the better. These innovations enhance the efficiency, transparency, and predictive capabilities of financial systems, offering new tools for managing risk, pricing assets, and understanding market behavior. This evolving landscape not only challenges long-standing paradigms but also creates opportunities for more dynamic and responsive economic policies and strategies. *Technical Innovation in Financial Economics: Advanced Theory, Practice, and Policy* explores how technological advancements have changed economic theory. This book brings together researchers and experts in the field of operational research and decision support to share their latest research findings, exchange ideas, and discuss challenges and opportunities in the field. Covering topics such as economic theory, finances, and advancements, this book is an excellent resource for anyone interested in operational research from both theoretical and practical perspectives.
