Transportation Research Board,1976 This synthesis is recommended to soils engineers materials engineers design engineers construction engineers and others involved in the acquisition and use of geo technical information in route selection design and construction of transportation facilities Avant propos Partial-lane Pavement Widening National Research Council (U.S.). Transportation Research Board,1975 Information from many highway departments and agencies was assembled and analysed in this effort to record and evaluate current practices in the use of partial lane pavement widening Specific problems on partial lane pavement widening projects narrow work areas acquisition of additional right of way variable subgrade reconditioning of existing pavement reflective cracking structure widening surface and subsurface drainage traffic during construction access for abutting owners and funding projects have been addressed and practices have been developed to meet specific needs Nearly all partial lane widening projects include provisions for placing an overlay over both the old and new pavement In a few cases the overlay may be placed during the following construction season The modification of the existing surface drainage alignment improvement by shifting the widening where possible to the inside of curves replacement of small angles by a smooth curve minimizing reflection cracks by provision of good subsurface drainage compaction of widening trench at or near the optimum

moisture content provision of good shoulder support and the use of substantial overlay to cover the joint are some practices described. The open trench hazard and advance coordination with abutting residents and businesses to avoid inconvenience are also discussed. Safety capacity and maintenance are important factors in planning the widening projects. Long range and short range plans, project selection, citizen participation and factors which affect the decision making process are outlined. The various aspects of design and construction are covered.

Long and Deep Tunnels Vittorio Guglielmetti, Shulin Xu, Gianni Alberto Arrigoni, Piergiorgio Grasso, 2016-04-15

The design and construction of long and deep tunnels, i.e. tunnels under mountains characterised by either considerable length and/or overburden, represent a considerable challenge. The scope of this book is not to instruct how to design and construct such tunnels but to share a method to identify the potential hazards related to the process of designing and constructing long and deep tunnels, to produce a relevant comprehensive analysis and listing to quantify the probability and consequences and to design proper mitigation measures and countermeasures. The design developed using probabilistic methods is verified during execution by means of the so-called Plan for Advance of the Tunnel (PAT) method, which allows adapting the design and control parameters of the future stretches of the tunnel to the results of the stretches already finished using the monitoring data base. Numerous criteria are given to identify the key parameters necessary for the PAT procedure. Best practices of excavation management with the help of real time monitoring and control

are also provided Furthermore cost and time evaluation systems are analysed Finally contractual aspects related to construction by contract are investigated for best development and application of models more appropriate for tunnelling construction contracts The work will be of interest to practising engineers designers consultants and students in mining underground tunnelling transportation and construction engineering as well as to foundation and geological engineers urban planners developers and architects *Tualatin-Sherwood-Edy Road, I-5 to Hwy 99W, Washington County*, 1988 *The Construction Specifier*, 1982-07 ASCE Combined Index American Society of Civil Engineers, 1994 Indexes materials appearing in the Society's Journals Transactions Manuals and reports Special publications and Civil engineering
