Mario Cartesian Plane:

The Legacy of Mario Pieri in Geometry and Arithmetic Elena Anne Marchisotto, James T. Smith, 2007-12-05 This book is the first in a series of three volumes that comprehensively examine Mario Pieri's life mathematical work and influence. The book introduces readers to Pieri's career and his studies in foundations from both historical and modern viewpoints. Included in this volume are the first English translations along with analyses of two of his most important axiomatizations: one in arithmetic and one in geometry. The book combines an engaging exposition, little-known historical notes, exhaustive references, and an excellent index. And yet the book requires no specialized experience in mathematical logic or the foundations of geometry.

Developing Mathematical Literacy in the Context of the Fourth Industrial Revolution Espinosa, Edgar Oliver Cardoso, 2021-03-12 In the context of the Fourth Industrial Revolution, a world of continuous alterations is glimpsed where science and technology are at the base of economic competitiveness and where innovation plays a strategic role in global competition so that they are forced to cover a series of requirements to compete successfully in an increasingly globalized economy including high investments in both education and research. Along these lines, the formation of mathematical learning is important because it is oriented towards the development of a set of skills with the aim of resolving situations of daily and professional lives. It focuses on the acquisition of employing the different ways of representing information in the form of models, constructions, and graphs to determine the best decision making. In this sense, it includes the mastery of the handling of numbers, measures, and structures to carry out the interpretation of operations and representations of a quantitative nature on personal and professional situations. For a society to favor innovation, the use of mathematical information is an essential condition that allows the development of creativity and analysis of information. Mathematics education plays a vital role in this development. *Developing Mathematical Literacy in the Context of the Fourth Industrial Revolution* studies the formation of mathematical abilities in the context of the Fourth Industrial Revolution regarding its development of both teaching and learning strategies as well as the use of ICT and its use in the development of this discipline in students. It is important that teachers of any educational level reorient their teaching strategies and their role as educators. Therefore, the chapters discuss up-to-date and relevant information on teaching and didactic tasks in the subject of mathematics. This book highlights mathematical pedagogies, ICT in mathematics learning, teacher training, and classroom strategies for mathematics. It is intended for teachers, pedagogical advisors, business trainers, higher education staff, administrators, teacher educators, practitioners, stakeholders, researchers, academicians, and students interested in mathematical literacy in the fourth industrial revolution.

Mario Merz: The Monograph Mario Merz, Pier Giovanni Castagnoli, Beatrice Merz, 2006 Mario Merz the late great proponent of Arte Povera envisioned the contemporary artist as a nomad ever mediating and meditating on the relationship between nature and culture He began to make work after his arrest in 1945 for anti fascist activities confined to jail he drew incessantly on whatever material he could find After his release he painted first in oil on canvas then began to pierce the canvas as well as objects such as bottles umbrellas and raincoats with neon tubes symbolically infusing them with energy In 1968 Merz adopted one of his signature motifs the igloo symbol of the transitory artist At base a metal skeleton the igloo

could be covered with site specific fragments of clay wax mud glass burlap or bundles of branches and decorated with political or literary phrases in neon tubing Merz's iconography later came to incorporate the Fibonacci formula of mathematical progression 1 2 3 5 8 13 21 34 stacked newspapers archetypal animals motorcycles and the table symbol of the human need for fulfillment and interaction This posthumous monograph is the most complete publication on the artist It includes documentation of his entire artistic production including paintings sculptures installations drawings neon and Fibonacci series work plus many previously unpublished materials With a comprehensive history of Merz's career a bibliography a biographic chronology and critical essays it offers a deep and deserving reflection of the artist and his significant role in twentieth century art

Evanescent Waves in Optics Mario Bertolotti, Concita Sibilia, Angela M. Guzman, 2017-10-30 This monograph provides an introductory discussion of evanescent waves and plasmons describes their properties and uses and shows how they are fundamental when operating with nanoscale optics Far field optics is not suitable for the design description and operation of devices at this nanometre scale Instead one must work with models based on near field optics and surface evanescent waves The new discipline of plasmonics has grown to encompass the generation and application of plasmons both as a travelling excitation in a nanostructure and as a stationary enhancement of the electrical field near metal nanosurfaces The book begins with a brief review of the basic concepts of electromagnetism then introduces evanescent waves through reflection and refraction and shows how they appear in diffraction problems before discussing the role that they play in optical waveguides and sensors The application of evanescent waves in super resolution devices is briefly presented before plasmons are introduced The surface plasmon polaritons SPPs are then treated highlighting their potential applications also in ultra compact circuitry The book concludes with a discussion of the quantization of evanescent waves and quantum information processing The book is intended for students and researchers who wish to enter the field or to have some insight into the matter It is not a textbook but simply an introduction to more complete and in depth discussions The field of plasmonics has exploded in the last ten years and most of the material treated in this book is scattered in original or review papers A short comprehensive treatment is missing this book is intended to provide just that
