present a model that allows educators to address educational inequity through the critical and adaptive use of existing literacy curriculum materials. In this accessible work they advise educators on ways to combine common classroom materials such as basal readers and core reading programs with instructional practices that provide high quality responsive instruction to all students. Edwards, White, Hopkins, and Castle credit literacy instruction as a core part of overall educational equity and they recognize the crucial role that educators play in translating materials into instruction that benefits all learners. Here they offer teacher education in support of this essential role, deftly guiding educators through a four part development process: CARE, an acronym for cultivating critical consciousness, analyzing materials, reconstructing curricula, and evaluating instruction reflectively to advance equity. Built upon culturally relevant, sustaining, and antiracist pedagogy, CARE enables teachers to provide literacy instruction that meets the range of needs and performance levels in classrooms supporting students in attaining academic achievement, cultural competence, and critical consciousness. The approach outlined in this work, which can be put into immediate practice, helps educators to provide literacy instruction that builds on students' multiple literacies and reduces educational inequity. *Knowledge, Curriculum and Equity* Brian Barrett, Ursula Hoadley, John Morgan, 2017-07-20

In 2008 the first in a series of symposia established a social realist case for knowledge as an alternative to the relativist tendencies of the constructivist, post structuralist, and postmodernist approaches dominant in the sociology of education. The second symposium focused on curriculum and the development of a theoretical language grounded in social realism to talk about issues of knowledge and curriculum. Finally the third symposium brought together researchers in a broad range of contexts to build on these ideas and arguments and with a concerted empirical focus bring these social realist ideas and arguments into conversation with data. *Knowledge, Curriculum and Equity: Social Realist Perspectives* contains the work of the third symposium where the strengths and gaps in the social realist approach are identified and where there is critical recognition of the need to incrementally extend the theories through empirical study. Fundamentally the problem that social realism is seeking to address is about understanding the social conditions of knowledge production and exchange as well as its structuring in the curriculum and in pedagogy. The central concern is with the on going social reproduction of inequality through schooling and exploring whether and how foregrounding specialised knowledge and its access holds the possibility for interrupting it. This book consists of 13 chapters by different authors working in Oceania, Asia, Europe, Africa, and North America. From very different vantage points the authors focus their theoretical and empirical sights on the assumptions about knowledge that underpin educational processes and the pursuit of more equitable schooling for all. *Expectations and Aspirations* Safaa El Tayeb El-Kogali, Caroline Krafft, 2019-01-30

Education, which has been at the heart of the Middle East and North Africa (MENA) region's history and civilizations for centuries, has a large untapped potential to contribute to human capital, well being, and wealth. The region has invested heavily in education for decades but it has not been able to reap the benefits of its investments. Despite a series of reforms

MENA has remained stuck in a low learning low skills level Expectations and Aspirations A New Framework for Education in the Middle East and North Africa identifies four key sets of tensions that are holding back education in the region credentials and skills discipline and inquiry control and autonomy and tradition and modernity These tensions are shaped by society and are reflected in classrooms If they are not addressed MENA will continue to operate at a level below its potential This report outlines a new framework with a three pronged approach that can help address these tensions and unleash the potential of education in MENA A concerted push for learning that starts early for all children regardless of background with qualified and motivated educators and that leverages technology uses modern approaches and monitors learning outcomes A stronger pull for skills by all stakeholders in the labor market and society that involves coordinated multisystem reforms within and beyond the education system A new pact for education at the national level with a unified vision shared responsibilities and accountabilities Education is not just the responsibility of the education system it is everyone s business The push pull and pact framework offers an opportunity for MENA to move forward to reclaim its heritage of a learned region and to meet the expectations and aspirations of its people The current situation in MENA requires a renewed focus on education not just as a national priority for economic growth and social development but as a national emergency for stability peace and prosperity

TESL Language and Communication Literacy *A Local Assessment Toolkit to Promote Deeper Learning* Karin Hess, 2018-02-28 For years educators have turned to the Hess Cognitive Rigor Matrices CRM when it comes to assessment Now for the first time the modules are packaged into one resource to help teachers evaluate the quality and premise of their current assessment system **Mathematics (Education) in the Information Age** Stacy A. Costa, Marcel Danesi, Dragana Martinovic, 2020-12-10 This book brings together ideas from experts in cognitive science mathematics and mathematics education to discuss these issues and to present research on how mathematics and its learning and teaching are evolving in the Information Age Given the ever broadening trends in Artificial Intelligence and the processing of information generally the aim is to assess their implications for how math is evolving and how math should now be taught to a generation that has been reared in the Information Age It will also look at the ever spreading assumption that human intelligence may not be unique an idea that dovetails with current philosophies of mind such as posthumanism and transhumanism The role of technology in human evolution has become critical in the contemporary world Therefore a subgoal of this book is to illuminate how humans now use their sophisticated technologies to chart cognitive and social progress Given the interdisciplinary nature of the chapters this will be of interest to all kinds of readers from mathematicians themselves working increasingly with computer scientists to cognitive scientists who carry out research on mathematics cognition and teachers of mathematics in a classroom
