Human Karyotyping Gizmo Overview

Directions: Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes.

Vocabulary: autosome, chromosomal disorder, chromosome, genome, karyotype, sex chromosome

Prior Knowledge Question (Do this BEFORE using the Gizmo.)

A **chromosome** is a rod-shaped structure made of coils of DNA. Most human cells have 23 pairs of chromosomes.

1. Why do you think humans have two sets of 23 chromosomes? (Hint: Where did each set come from?)

Humans have two sets of 23 chromosomes because a human gets one set of 23 chromosomes from their mother and another set of 23 chromosomes from their father, which results in 2 sets of 23 chromosomes.

2. How do you think different people's chromosomes would compare?

Different people's chromosomes would compare because most humans have 46 chromosomes. These chromosomes are mostly the same shape and size. The difference between people's chromosomes is found in the sex chromosomes. Males have one X chromosome and one Y chromosome. Females have two X chromosomes. People's chromosomes come from their parent's chromosomes. These chromosomes are unique in their own way, since these chromosomes have different variations. For example, people have different eye colors.

Gizmo Warm-up

Scientists use **karyotypes** to study the chromosomes in a cell. A karyotype is a picture showing a cell's chromosomes grouped together in pairs.

In the *Human Karyotyping* Gizmo, you will make karyotypes for five individuals. Take a look at the **SIMULATION** pane. Use the arrows to click through the numbered list of chromosomes at the bottom right of the pane.

1. How does the appearance of the chromosomes change as you move through the list?
