## Student Exploration: Uniform Circular Motion

**Background:** circular motion is the motion of an object moving in a circular path. The object's displacement, velocity, and acceleration vectors change.

**From the Gizmo:** Open the Uniform Circular Motion Gizmo using the browser.

1. As time is advancing, is the magnitude of the velocity vector (the blue arrow) changing? **Added displacement (distance) but the size (speed) stays the same. In other words, the magnitude of the velocity vector remains constant throughout the entire motion.**

2. Are you sure the velocity vector path will be straight if the magnitude changes? **straight because the velocity vector is perpendicular to the radius.**

**Before working:**

The Uniform Circular Motion Gizmo is displaying the velocity vector as a blue arrow. The position field below shows the coordinates of the object's starting position. The initial velocity vector is shown as a blue arrow pointing right.

Click the Run button to start the motion. The velocity vector is shown as a blue arrow.

3. What are the initial position (m) and velocity components (m/s) of the object? **initial position (0,0) and velocity (0,10)**
4. What time (s),  $t$ , and magnitude (m/s) of the velocity vector (m/s) when the object is at the top of the circle? **time is 2.5 seconds, magnitude is 10 m/s**
5. What time (s),  $t$ , and magnitude (m/s) of the velocity vector (m/s) when the object is at the bottom of the circle? **time is 4.7 seconds, magnitude is 10 m/s**
6. What time (s),  $t$ , and magnitude (m/s) of the velocity vector (m/s) when the object is at the left of the circle? **time is 7.3 seconds, magnitude is 10 m/s**
7. What time (s),  $t$ , and magnitude (m/s) of the velocity vector (m/s) when the object is at the right of the circle? **time is 9.8 seconds, magnitude is 10 m/s**
