Getting Started with Docker Enterprise Edition on IBM Z Lydia Parziale, Eduardo Simoes Franco, Robert Green, Eric Everson Mendes Marins, Mariana Roveri, Nilton Carlos Dos Santos, IBM Redbooks, 2019-03-08 What is the difference between a virtual machine and a Docker container? A virtual machine (VM) is like a house. It is fully contained with its own plumbing and heating and cooling system. If you want another house, you build a new foundation with new walls, new plumbing and its own heating and cooling system. VMs are large. They start their own operating systems. Containers are like apartments in an apartment

building They share infrastructure They can be many different sizes You can have different sizes depending on the needs Containers live in a Docker host If you build a house you need many resources If you build an apartment building each unit shares resources Like an apartment Docker is smaller and satisfies specific needs is more agile and more easily changed This IBM Redbooks publication examines the installation and operation of Docker Enterprise Edition on the IBM Z platform
