30 Mathematics Lessons Using the TI-15 Christine Dugan, 2009-11-21 This book is designed for grades 3-5 instruction and provides step by step mathematics lessons that incorporate the use of the TI-15 calculator throughout the learning process. The 30 lessons included present mathematics in a real world context and cover each of the five strands: number and operations, geometry, algebra, measurement, and data analysis and probability. 248pp plus Teacher Resource CD. **Purpose Driven Teacher** Joseph I. Monye PhD, 2023-06-25 Purpose Driven Teacher College and Career Readiness Mathematics Skills anticipates how to focus mathematics knowledge and problem solving skills amongst High school and College students in building conceptual, representational, and abstract mathematical thinking and discourse. This book poses purposeful questions and answers to enable students build procedural fluency from their unique conceptual understanding of mathematical problem solving. Inner City students and especially Minority students of African descent will find the psychology of this book especially useful. **It's All Relative** Anne Collins, Linda Dacey, 2024-11-01 For years students have been taught to cross multiply when presented with proportion problems. Few understood what they were doing or why they were doing it. Rarely were students invited to think about various representations to determine the relationship between the two ratios being compared. The ideas and activities in this guide will help you provide students with the conceptual understanding of ratios and proportional thinking that is essential for solving real world problems and achieving success in higher level mathematics. *It's All Relative* includes thirty modules which are aligned to specific Common Core State Standards. Each module in this accessible spiral bound flipchart addresses specific mathematical practices and common misconceptions, features timely classroom examples, includes proven ready to use activities, and provides ideas for adapting activities to meet the needs of individual learners. The authors particularly emphasize how to use visual models: tables, tape diagrams, graphs, and double number lines to represent ratios and proportional thinking. These visual models, which may be new to many teachers, enhance students' conceptual understanding and improve their ability to solve a wide range of proportional reasoning problems.
