**Improving Sustainability During Hospital Design and Operation**

Stefano Capolongo, Marta Carla Bottero, Maddalena Buffoli, Emanuele Lettieri, 2015-02-25 This book describes the Sustainable High Quality Healthcare SustHealth project which had the goal of developing an original multidisciplinary evaluation tool that can be applied to assess and improve hospitals overall sustainability The comprehensive nature of the appraisal offered by this tool exceeds the scope of most current rating systems which typically permit a thorough evaluation of relevant environmental factors when designing a new building but fail to consider social and economic impacts of the design phase or the performance of the hospital's operational structure in these fields The multidisciplinary evaluation system was developed from its very inception through to its testing by following a scientific experimental method in which a global perspective was constantly maintained as opposed to a focus only on specific technical issues Application of the SustHealth rating tool to a currently functioning hospital or one under design will identify weaknesses and guide users to potential low cost short term solutions and longer term strategies for improvement

**Business and Human Rights** Rory Sullivan, Mary Robinson, 2017-09-08 The end of the Cold War and the virtual disappearance of communism have completely altered the world economy The supply chains of supermarkets and consumer goods industries have spread ever more widely and deeply into Asia Africa and South America while oil mining and financial companies among many others have invested heavily in countries that were previously denied to them by political or ideological barriers While companies have seized the opportunities presented by globalisation they have in many cases been completely unprepared for the risks presented by their headlong rush into these new markets Companies have found themselves and their business partners operating in countries where corruption injustice internal conflict and human rights violations are rife An increasingly alert and critical world has acted as watchdog highlighting corporate malpractice and the links between corporations and repressive regimes It has increasingly been argued that companies have responsibilities for the protection and promotion of human rights These arguments are at least to some extent accepted by companies Yet despite the increasing use of human rights language in public policy discourses the expectations of companies remain unclear That is what are the ethical imperatives What are the legal expectations How far does responsibility extend What can companies actually do in practice The debate is further complicated by the range of actors companies governments international institutions local communities non governmental organisations NGOs trade unions consumers involved by debates around free trade versus and fair trade by the discussion of the specific role of governments and by questions about the relative merits of regulation and self regulation Business and Human Rights provides an analysis of the relationship between companies and human rights in the context of globalisation The analysis is in two parts The first maps the reasons financial ethical regulatory why human rights have become a business

issue However simply because there are reasons why companies should be concerned about human rights this does not say what companies should or could do Therefore the second part of the book looks at the practical experiences of companies in responding to specific human rights issues in the context of their own operations in their supply chains and in specific countries These case studies many of which have not been previously published or analysed from the perspective of human rights provide important insights into questions such as How do companies organise themselves to respond to human rights challenges What have the experiences been positive and negative How have companies responded to specific situations What are the roles and responsibilities of other actors government trade unions NGOs What are the limits to responsibility In this outstanding collection Rory Sullivan has drawn together leading thinkers and actors from the debate on business and human rights to establish how far the business and human rights debate has evolved and explore the many complex questions around roles responsibilities and solutions that remain to be answered

**The Economics of Artificial Intelligence** Ajay Agrawal, Joshua Gans, Avi Goldfarb, Catherine E. Tucker, 2024-03-14 A timely investigation of the potential economic effects both realized and unrealized of artificial intelligence within the United States healthcare system In sweeping conversations about the impact of artificial intelligence on many sectors of the economy healthcare has received relatively little attention Yet it seems unlikely that an industry that represents nearly one fifth of the economy could escape the efficiency and cost driven disruptions of AI The Economics of Artificial Intelligence Health Care Challenges brings together contributions from health economists physicians philosophers and scholars in law

public health and machine learning to identify the primary barriers to entry of AI in the healthcare sector Across original papers and in wide ranging responses the contributors analyze barriers of four types incentives management data availability and regulation They also suggest that AI has the potential to improve outcomes and lower costs Understanding both the benefits of and barriers to AI adoption is essential for designing policies that will affect the evolution of the healthcare system
