Extrusion Feed Guide Technology:

Handbook of Industrial Polyethylene and Technology Mark A. Spalding, Ananda Chatterjee, 2017-10-26 This handbook provides an exhaustive description of polyethylene. The 50 chapters are written by some of the most experienced and prominent authors in the field providing a truly unique view of polyethylene. The book starts with a historical discussion on how low density polyethylene was discovered and how it provided unique opportunities in the early days. New catalysts are presented and show how they created an expansion in available products including linear low density polyethylene, high density polyethylene, copolymers and polyethylene produced from metallocene catalysts. With these different catalysts systems a wide range of structures are possible with an equally wide range of physical properties. Numerous types of additives are presented that include additives for the protection of the resin from the environment and processing fillers, processing aids, anti-fogging agents, pigments and flame retardants. Common processing methods including extrusion, blown film, cast film, injection molding and thermoforming are presented along with some of the more specialized processing techniques such as rotational molding, fiber processing, pipe extrusion, reactive extrusion, wire and cable and foaming processes. The business of polyethylene including markets, world capacity and future prospects are detailed. This handbook provides the most current and complete technology assessments and business practices for polyethylene resins.

Guidelines for feed use in carp and trout production systems in Central Asia and Eastern Europe Shipton, T. A., 2021-07-06 In aquaculture the provision of high quality aquafeeds that satisfy the nutritional requirements of the culture species and optimize growth are a prerequisite to improving production yields, lowering production costs and improving economic returns to farmers. Under semi-intensive and intensive carp and trout culture aquafeed costs usually account for the highest single production cost, typically accounting for 50-60 percent of total production costs. The aquafeeds available to farmers vary widely with respect to quality, nutritional value and cost. Depending on the feed type, production system and farmer preferences there are multiple feed management strategies that can be adopted by farmers. In order to optimise feed use and minimise feed production costs it is essential that farmers select appropriate feeds and optimise their on-farm feed management practices. These guidelines are designed to provide farmers with practical guidance on how to select feeds and to optimise their use by implementing appropriate on-farm feed management practices. The guidelines provide an introduction to fish nutrition with a focus on the dietary nutritional requirements of commercially cultured carps and trout. The types of aquafeeds, live feeds, supplementary farm-made and commercially manufactured feeds, their composition and nutritional value, manufacture and use are discussed. On-farm feed management practices focus on feeding methods, feed storage and methods to optimise feed consumption, calculating feed rations, feeding frequency, assessing appetite and the feeding response.
