Giant Hydrocarbon Reservoirs Of The World Aapg Memoir No 88:

Giant Hydrocarbon Reservoirs of The World Paul Mitchell Harris, L. James Weber, 2006 Reservoirs described in this volume are located in the Middle East Asia West Africa North and South America The authors explore historical and alternative approaches to reservoir description characterization and management as well as examining appropriate levels and timing of data gathering technology applications evaluation techniques and management practices in various stages in the life of individual development projects The giant fields discussed address issues important to reservoir description characterization and management from both geologic engineering perspectives Multiscale Modeling of Deep-water Channel Deposits Lisa Elizabeth Stright, 2011 Sedimentological models capture the processes and subsequent deposits that explain the distribution of facies within a depositional system The first sedimentological models for deep water depositional systems were portrayed as idealized shelf break to slope submarine basin sediment dispersal systems These models were developed from ancient outcrop exposures Mutti and Lucchi 1972 and from the modern day seafloor Normark 1970 1978 More recent model development has been based largely on observations from modern slope channels including the Amazon Channel Pirmez and Imran 2003 offshore West African Abreu et al 2003 Deptuck et al 2003 and attempts at generalization from multiple studies Mayall et al 2006 as well as ancient outcrop studies e g Brushy Canyon Gardner et al 2003 Concepts from these sedimentological models have been the principle foundation for development of quantitative geostatistical models A geostatistical model adapts the conceptualization of facies distribution from the sedimentological model This information is then coded into a three dimensional gridded computer model directly constrained to available data i e wireline logs core data and seismic attributes Geostatistical models developed for deep water depositional systems have primarily focused on either sinuous channels confined by levees or erosional surfaces e g Larue and Hovadik 2006 Labourdette et al 2007 Pyrcz et al 2008 McHargue et al 2010 Sylvester et al 2010 or basin floor or overbank lobes associated with loss of confinement from sinuous channels Pyrcz et al 2005 Wellner et al 2006 Zhang et al 2009 Although widely used such geostatistical models have limited applicability in fitting all deep water depositional systems and cases exist that require modification of such models or creation of entirely new models In this dissertation I show the importance of synthesizing sedimentological and geostatistical models based on observations from the data The primary objectives of this dissertation are 1 to present methodologies to enable the creation of better sedimentological models from remote sensing data and 2 to present a means to model depositional architectures for a system that cannot currently be captured with standard geostatistical modeling approaches The main contributions are threefold The first contribution presented in Chapter 1 is a methodology designed to extract subseismic lithologic information from inverted pre stack seismic reflectivities Also in Chapter 1 the predictive power of this methodology is demonstrated on a dataset from the subsurface of the Molasse Basin in Upper Austria Beyond this dissertation Bernhardt et al in review adopted the methodology to support the development of a more predictive

sedimentological model for the same dataset The second contribution presented in Chapter 2 is a new approach for building predictive quantitative spatial models for a deep water channel belt in which sand deposition is controlled by mass transport deposit topography This methodology leverages sedimentological interpretations derived from subseismic lithologic information as presented in Chapter 1 and the sedimentological work of Bernhardt et al in review The final contribution of this dissertation is presented in two outcrop studies Chapters 3 and 4 utilize extensive data collected from deep water channel outcrops to build digital outcrop models The model from Chapter 3 is used to demonstrate the predictive power of pre stack seismic reflectivity data in interpreting the large scale architecture of a heterolithic deep water channel system exposed in the sea cliffs along Blacks Beach near La Jolla California Finally the outcrop modeling study presented in Chapter 4 presents a methodology to capture structural and stratigraphic uncertainty in outcrop observations in order to analyze the three dimensional channel morphology of the Cerro Toro deep water channel belt exposed in Sierra del Toro outcrops in the Magallanes Basin of Chile These four chapters are described in more detail below

Carbonate Geochemistry Annette Summers Engel, Scott Engel, Paul Moore, Harvey DuChene, 2011-08-01 Selected papers and abstracts of the symposium held August 6 through 9 2011 Billings Montana Anatomy of a Giant Carbonate Reservoir Stephen C. Ruppel, 2013-02-20 Hardcover plus DVD

Microbial Carbonates in Space and Time: D.W.J. Bosence, K.A. Gibbons, D.P. Le Heron, W.A. Morgan, T. Pritchard, B.A. Vining, 2015-08-21 Microbial carbonates microbialites are remarkable sedimentary deposits because they have the longest geological range of any type of biogenic limestones they form in the greatest range of different sedimentary environments they oxygenated the Earth's atmosphere and they produce and store large volumes of hydrocarbons This Special Publication provides significant contributions at a pivotal time in our understanding of microbial carbonates when their economic importance has become established and the results of many research programmes are coming to fruition It is the first book to focus on the economic aspects of microbialites and in particular the giant pre salt discoveries offshore Brazil In addition it contains papers on the processes involved in formation of both modern and ancient microbialites and the diversity of style in microbial carbonate buildups structures and fabrics in both marine and non marine settings and throughout the geological record

Oil Field Production Geology Mike Shepherd, 2009-09-20 This book was written for students new professionals in oil companies and for anyone with an interest in reservoir geology It explains the background to production geology in the context of oil field subsurface operations It also gives practical guidelines as to how a production geologist can analyze the reservoir geology and fluid flow characteristics of an oil field with the aim of improving hydrocarbon recovery Advice is given on how to search for the remaining oil volumes in a producing field where these pockets are typically found and then how to plan wells to target these volumes Publisher's description

Petroleum Geology of the North Sea K. W. Glennie, 2009-06-29 Since the 3rd edition of this publication

emphasis within the petroleum industry has shifted from exploration to appraisal and development of existing hydrocarbon resources This change is reflected in this new 4th edition which has been significantly expanded to accomodate additional material The centrepiece of the book however remains a series of descriptions in stratigraphic order of the depositional history and hydrocarbon related rock units of the North Sea *Shale Reservoirs* John Breyer,2012-08-20 Hardcover plus CD

CIM Bulletin Canadian Institute of Mining and Metallurgy,Canadian Institute of Mining, Metallurgy and Petroleum,1972-07 *Abnormal Pressures in Hydrocarbon Environments* B. E. Law,Gregory F. Ulmishek,Vyacheslav I. Slavin,1998 The association of abnormal pressures with hydrocarbon accumulations is statistically significant Within abnormally pressured reservoirs empirical evidence indicates that the bulk of economically recoverable oil and gas occurs in reservoirs with pressure gradients less than 0.75 psi ft 17.4 kPa m and there is very little production potential from reservoirs that exceed 0.85 psi ft 19.6 kPa m Abnormally pressured rocks are also commonly associated with unconventional gas accumulations where the pressuring phase is gas of either a thermal or microbial origin **Subject Guide to Books in Print** ,1991 The Petroleum Resources of the North Sea William D. Dietzman,1983 *Lacustrine Basin Exploration* Barry Jay Katz,1990 **GeoArabia** ,2004 Conjugate Divergent Margins Webster Mohriak,Al Danforth,Paul J. Post,G. C. Tari,Michal Nemčok,Sudipta T. Sinha,2013 The main focus of the book is the geological and geophysical interpretation of sedimentary basins along the South Central and North Atlantic conjugate margins but concepts derived from physical models outcrop analogues and present day margins are also discussed in some chapters There is an encompassing description of several conjugate margins worldwide based on recent geophysical and geological datasets An overview of important aspects related to the geodynamic development and petroleum geology of Atlantic type sedimentary basins is also included Several chapters analyse genetic mechanisms and break up processes associated with rift phase structures and salt tectonics providing a full description of conjugate margin basins based on deep seismic profiles and potential field methods **Giant Hydrocarbon Reservoirs of the World** Paul Mitch Harris,L. J. Weber,2006 **Oil & Gas Science and Technology** ,2005 *Revue de l'Institut français du pétrole* Institut français du pétrole,1991
